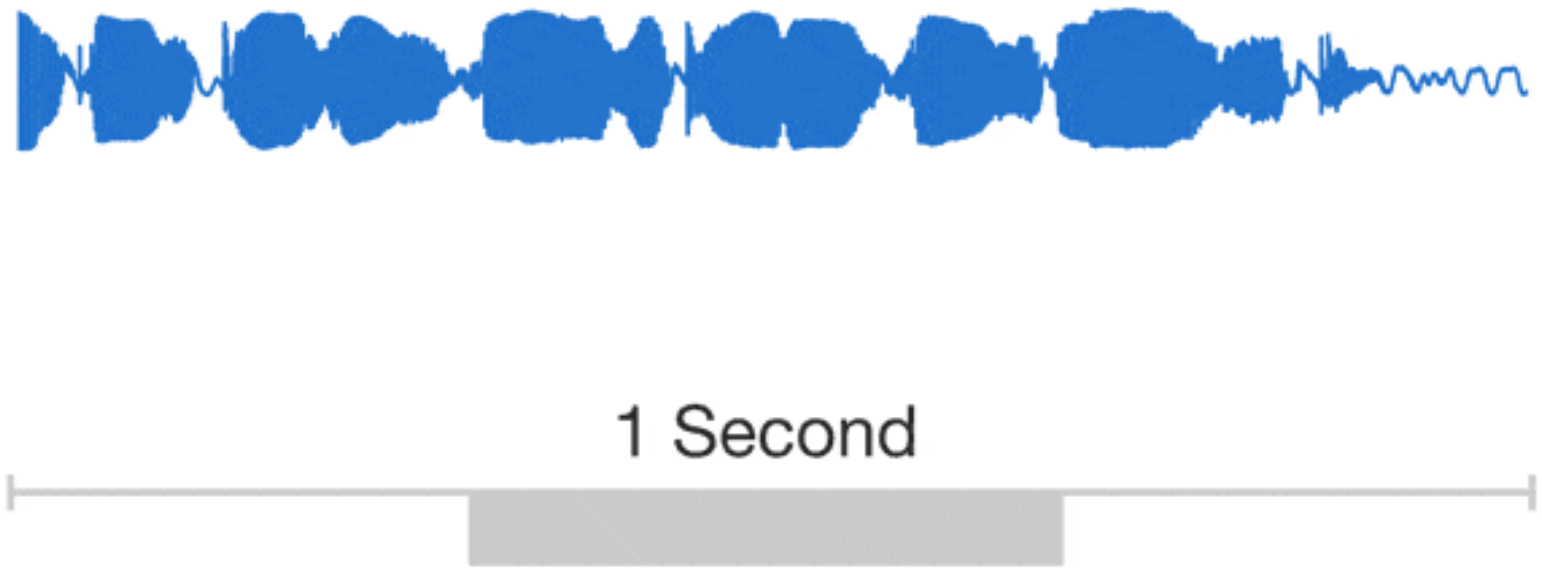
Digital Audio

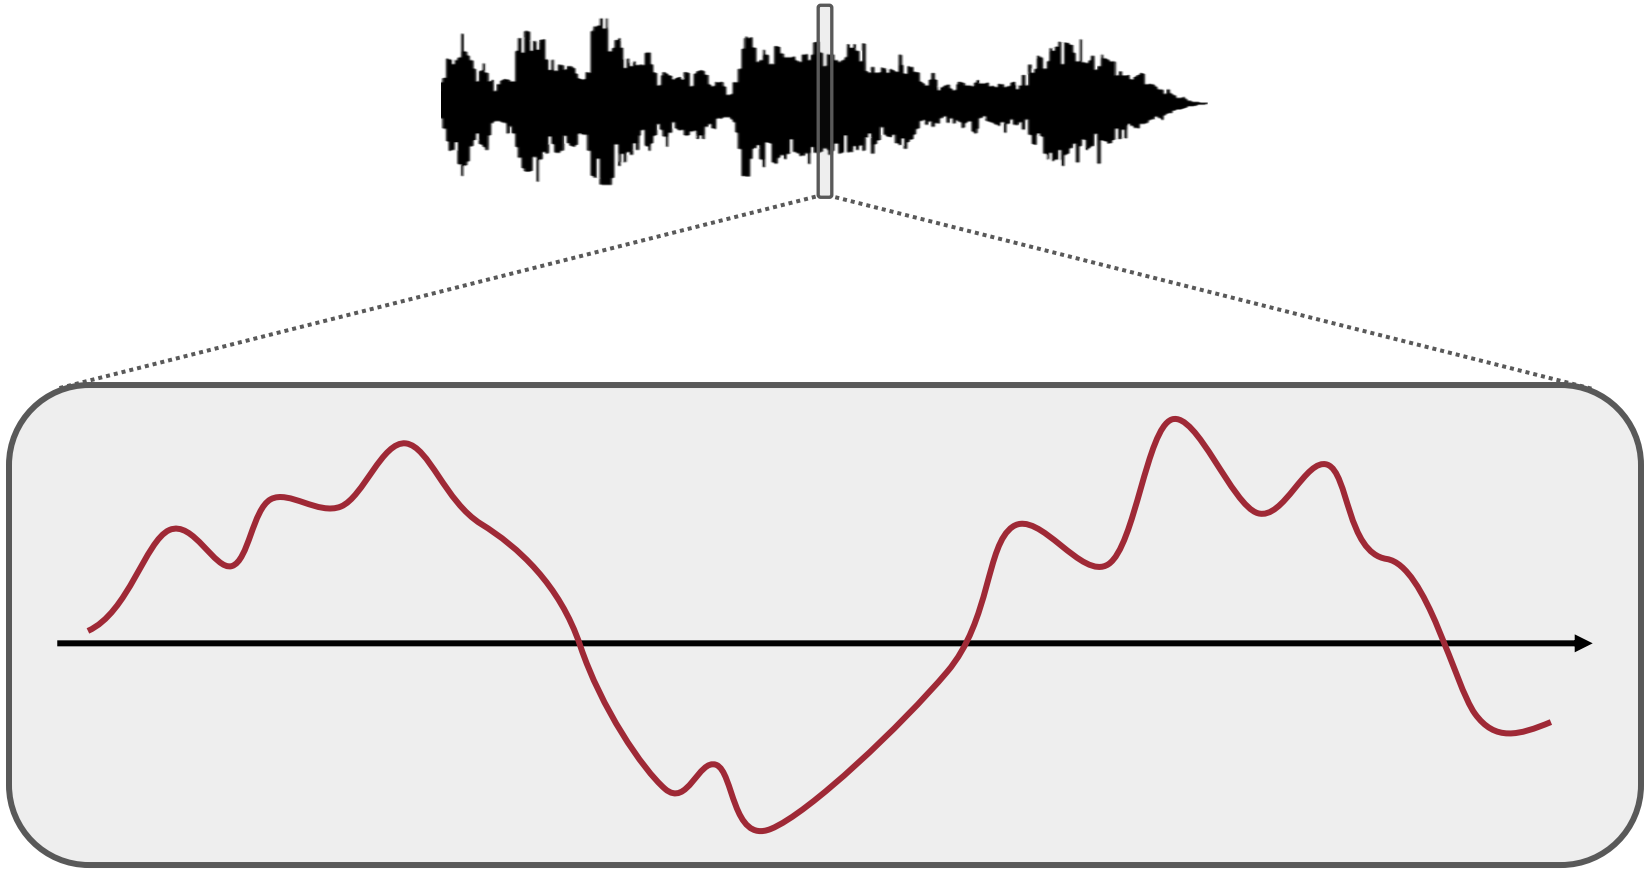
Digital Audio



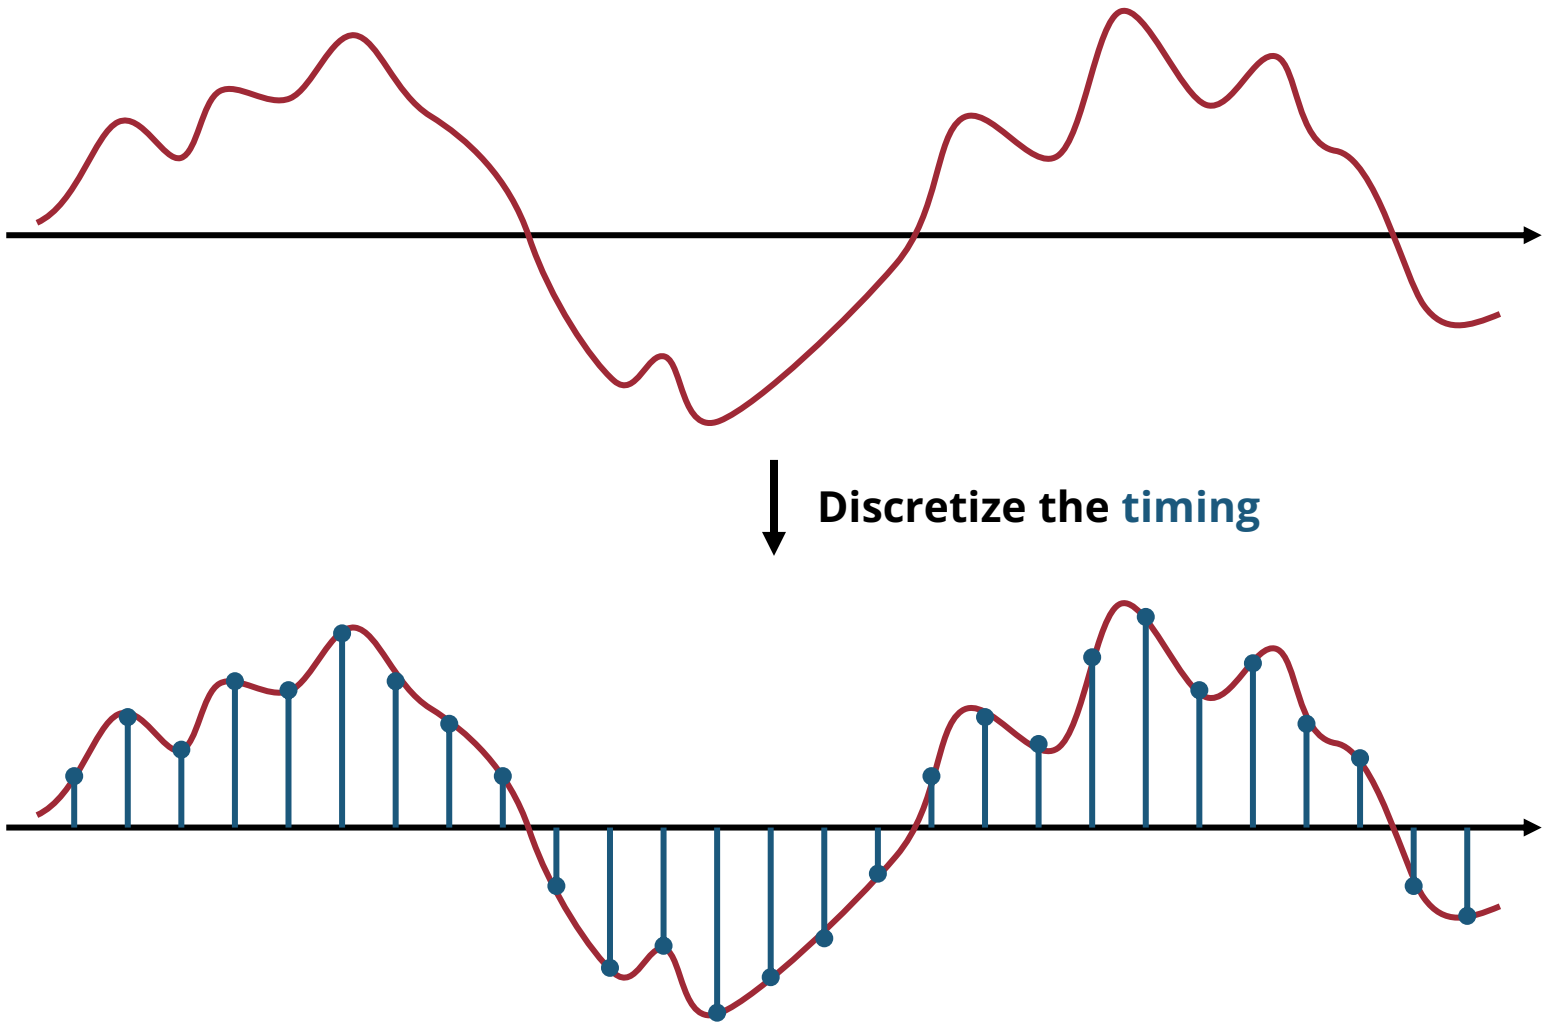
(Source: van den Oord et al., 2016)

Aaron van den Oord and Sander Dieleman, "WaveNet: A generative model for raw audio," *DeepMind Blog*, September 8, 2016.

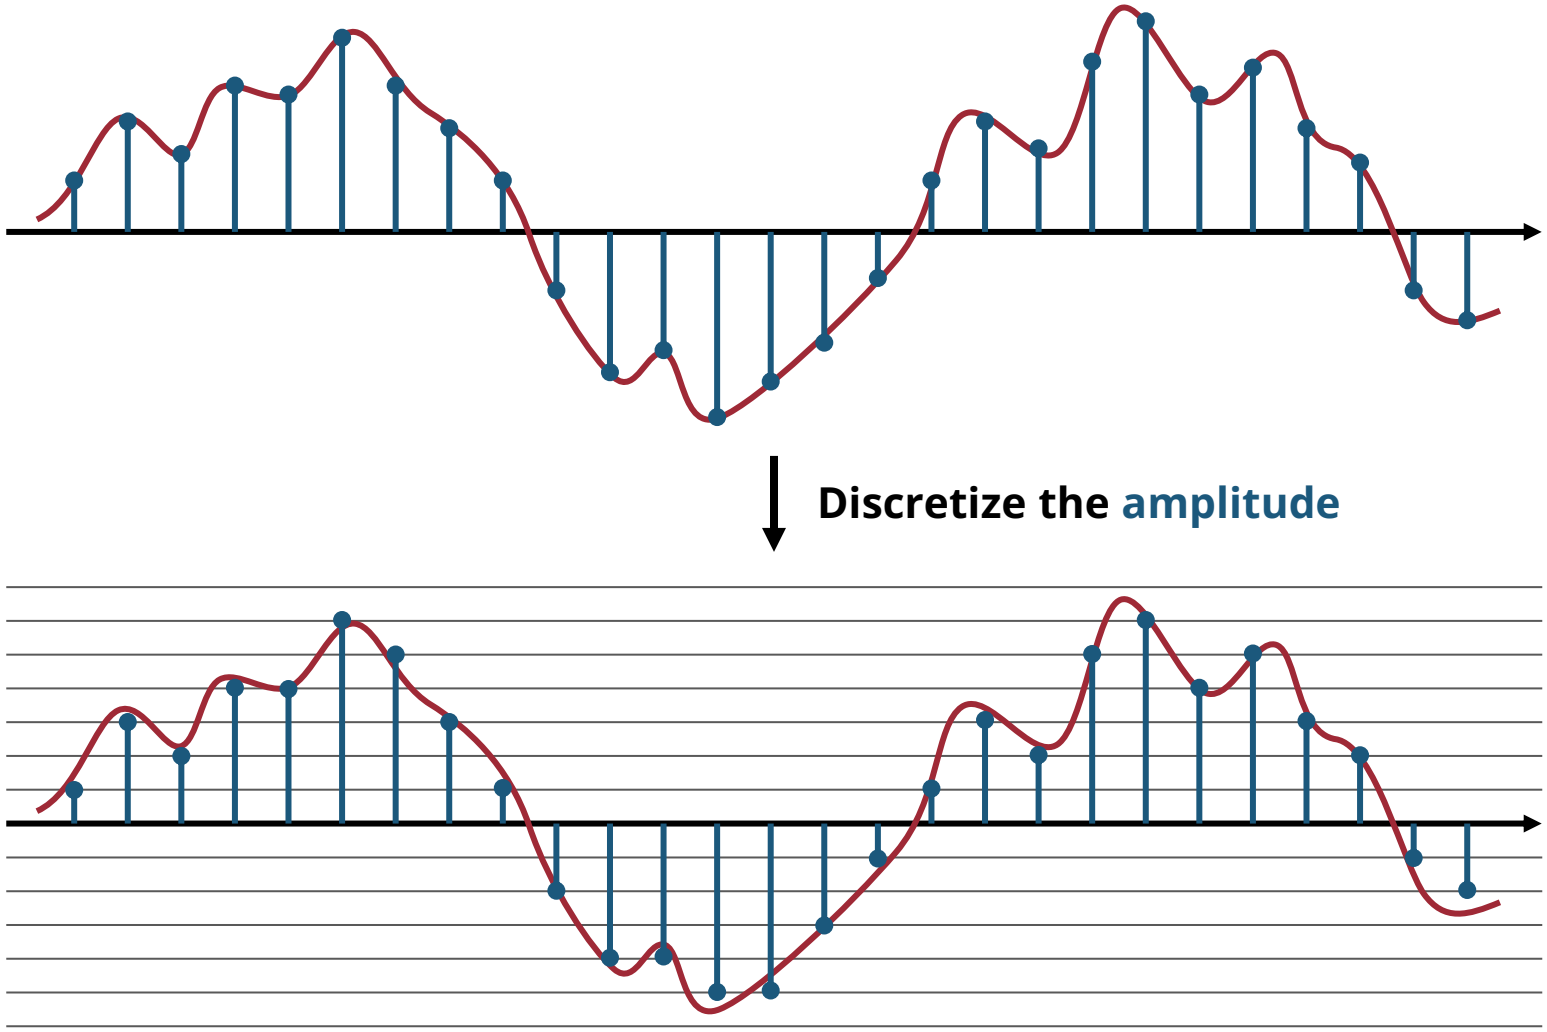
Waveform



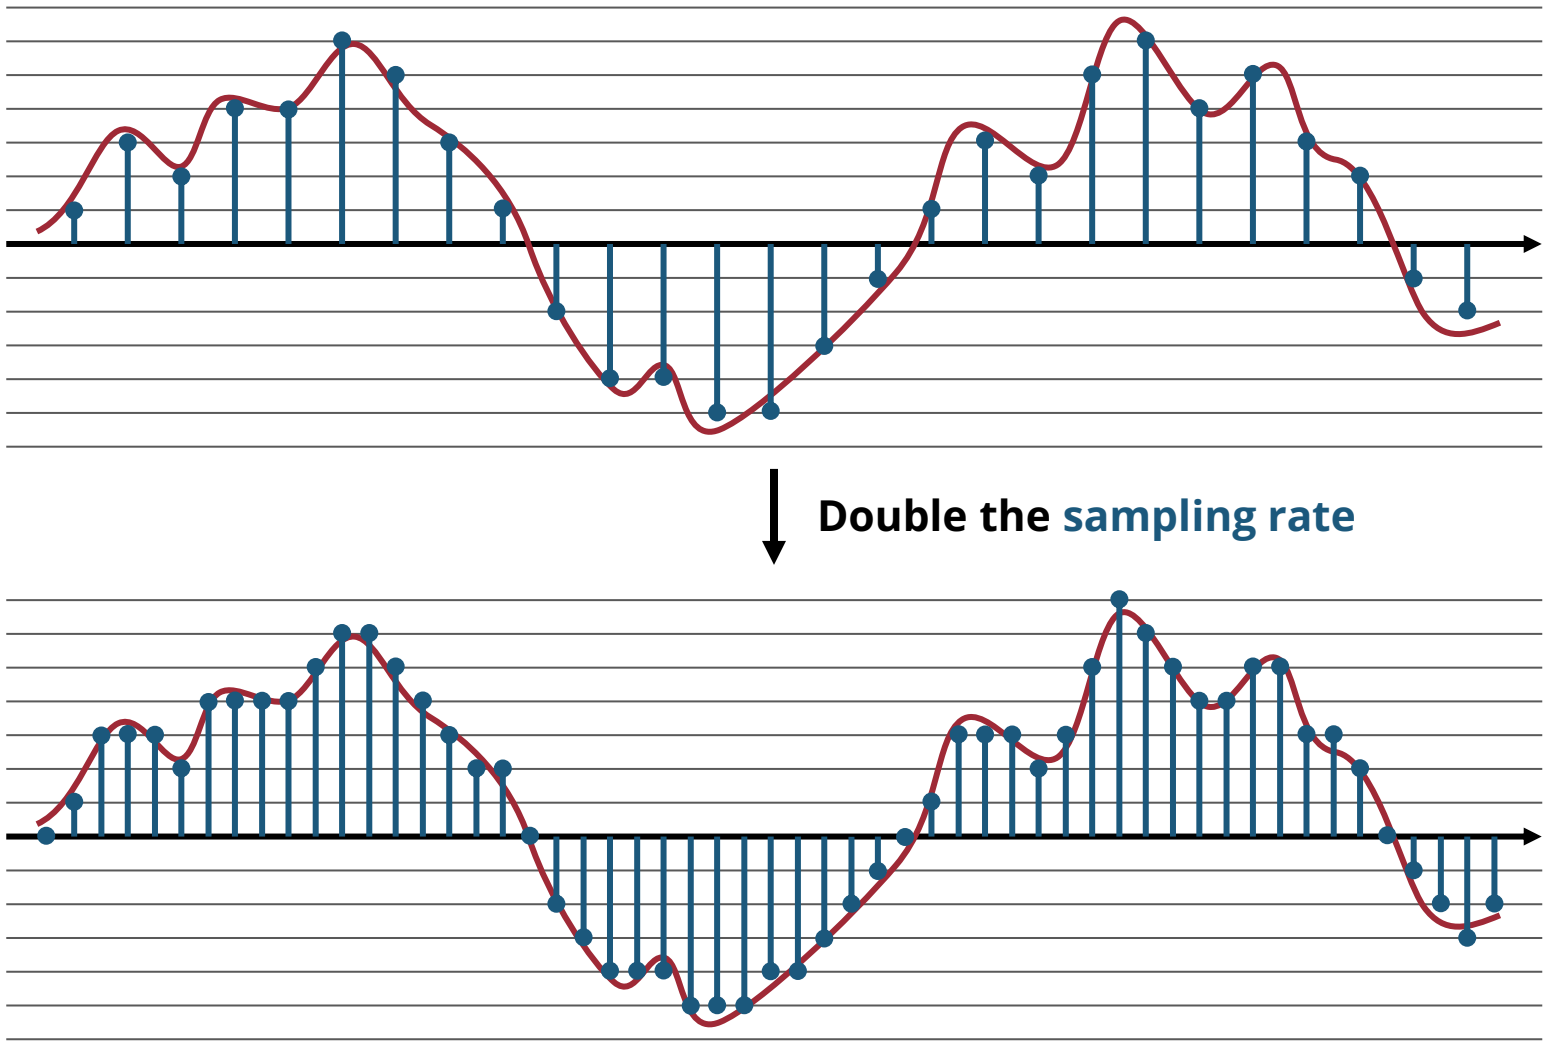
Digitalizing Audio: Timing



Digitalizing Audio: Amplitude



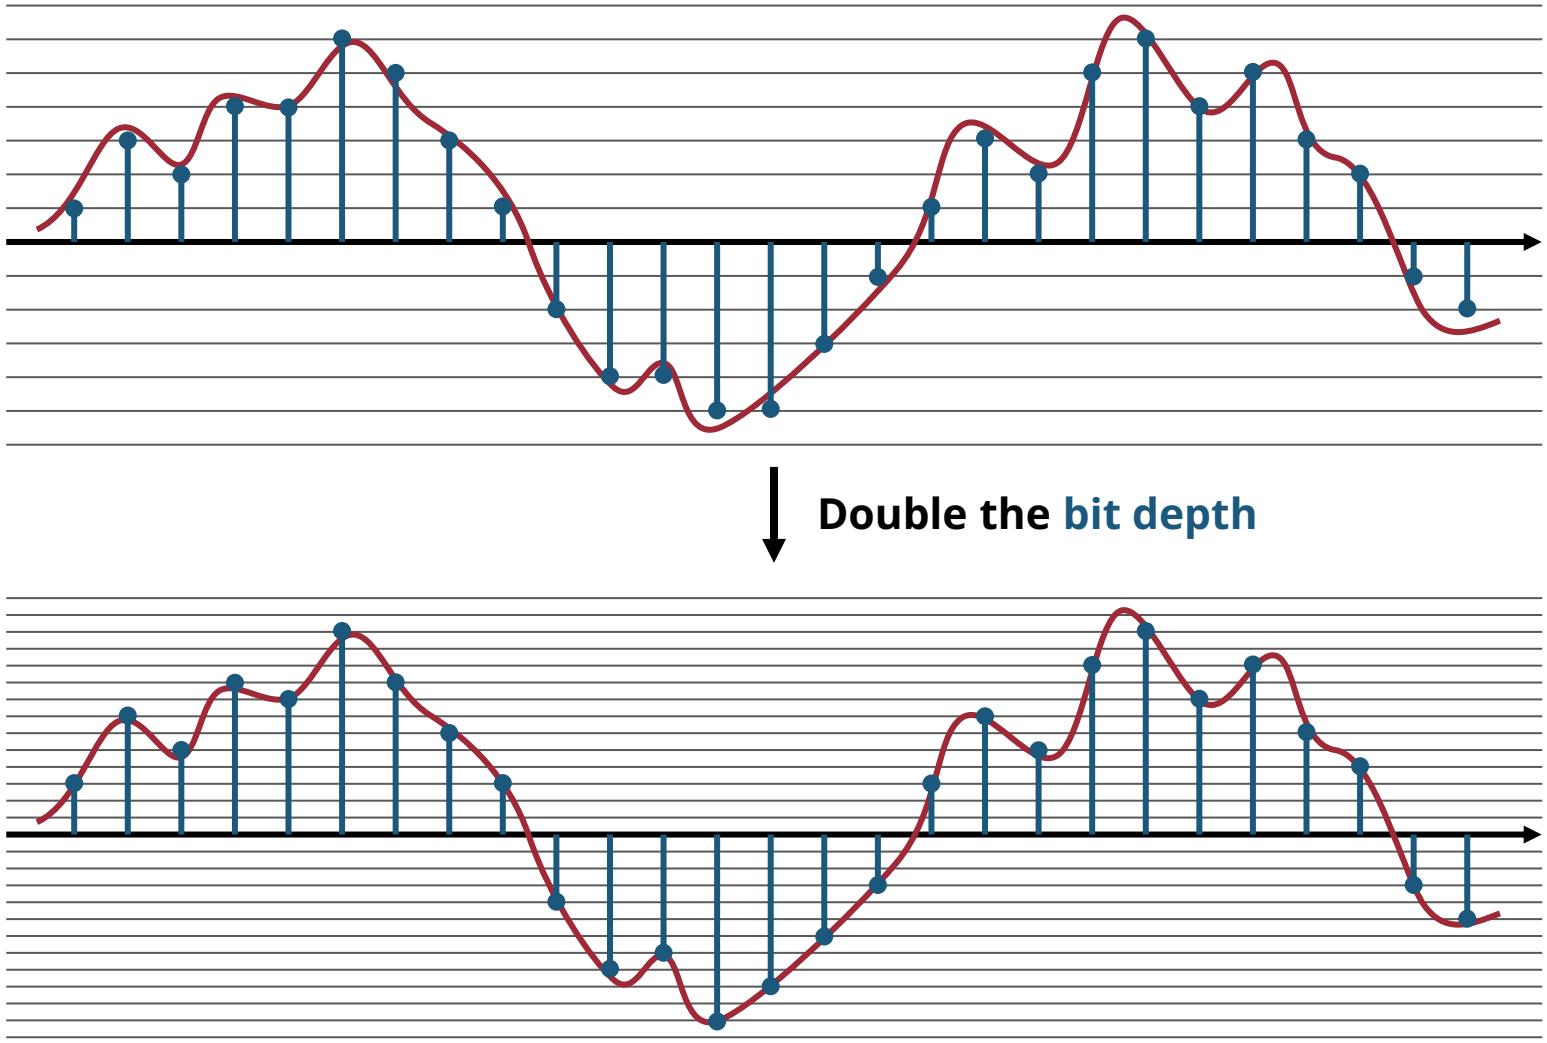
Resolution: Sampling Rate



Sampling Rate

- **Definition**: **Number of samples per second**
  - How many times the “sound pressure” is measured per second
  - The higher the sampling rate, the lower the timing distortion
- **Common sampling rates**
  - **Telephone**: 8 kHz
  - **CD**: 44.1 kHz
  - **DVD**: 48 kHz
  - **Modern audio interfaces & DAWs**: 96 kHz, 192 kHz

Resolution: Bit Depth



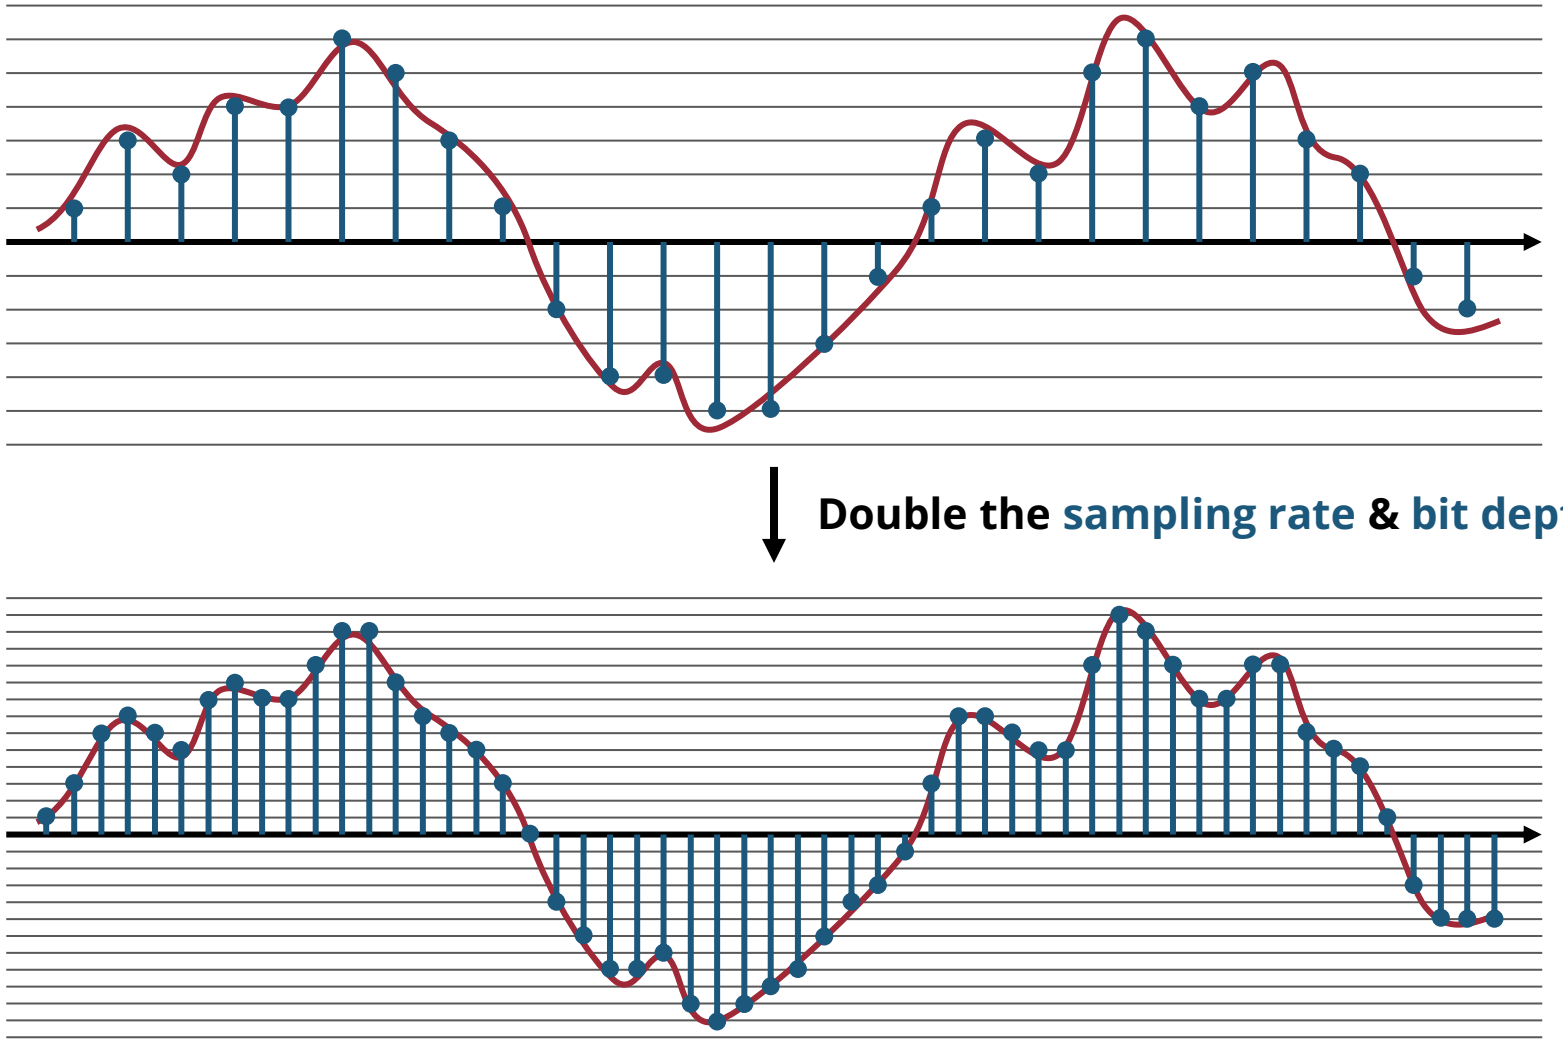
Bit Depth

- **Definition**: **Number of bits used to store each sample**
  - How many bits used to store the amplitude
  - The higher the bit depth, the lower the amplitude distortion
- **Common bit depth**
  - **Chiptunes**: 8 bit
  - **CD**: 16 bit
  - **Modern audio interfaces & DAWs**: 24 bit, 32 bit

Bit Depth

- **8 bit**: -128 to 127
- **16 bit**: -32,768 to 32,767
- **24 bit**: -8,388,608 to 8,388,607
- **32 bit**: 32-bit floating numbers

Resolution: Sampling Rate & Bit Depth



Bit Depth ≠ Bit Rate

- **Bit Depth**: **Number of bits used to store each sample**
  - Example: **CD quality** is **16bit/44.1kHz**

- **Bit Rate**: **Amount of data transferred per second** (unit: bits/sec)
  - Example: **320K MP3** files → **320kbps** (320,000 bits per second)
  - Example: **YouTube** recommendation → **128 kbps** for mono and **384 kbps** for stereo
  - Determines the file size!

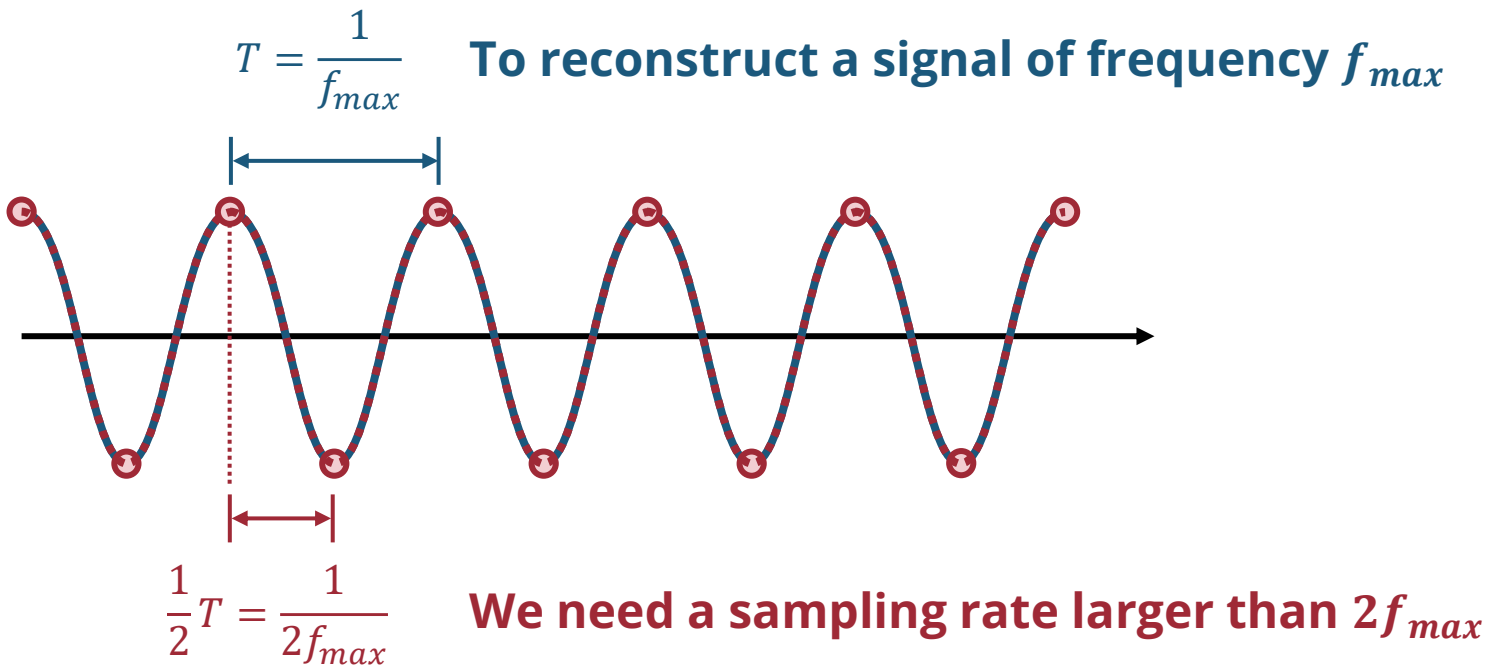
Sampling Theorem

Nyquist–Shannon Sampling Theorem

- **Theorem**: If a signal contains no frequencies higher than f_{max}, then the signal can be perfectly reconstructed when sampled at a rate $f_s > 2f_{max}$
  - $2f_{max}$ is usually referred to as the **Nyquist rate**

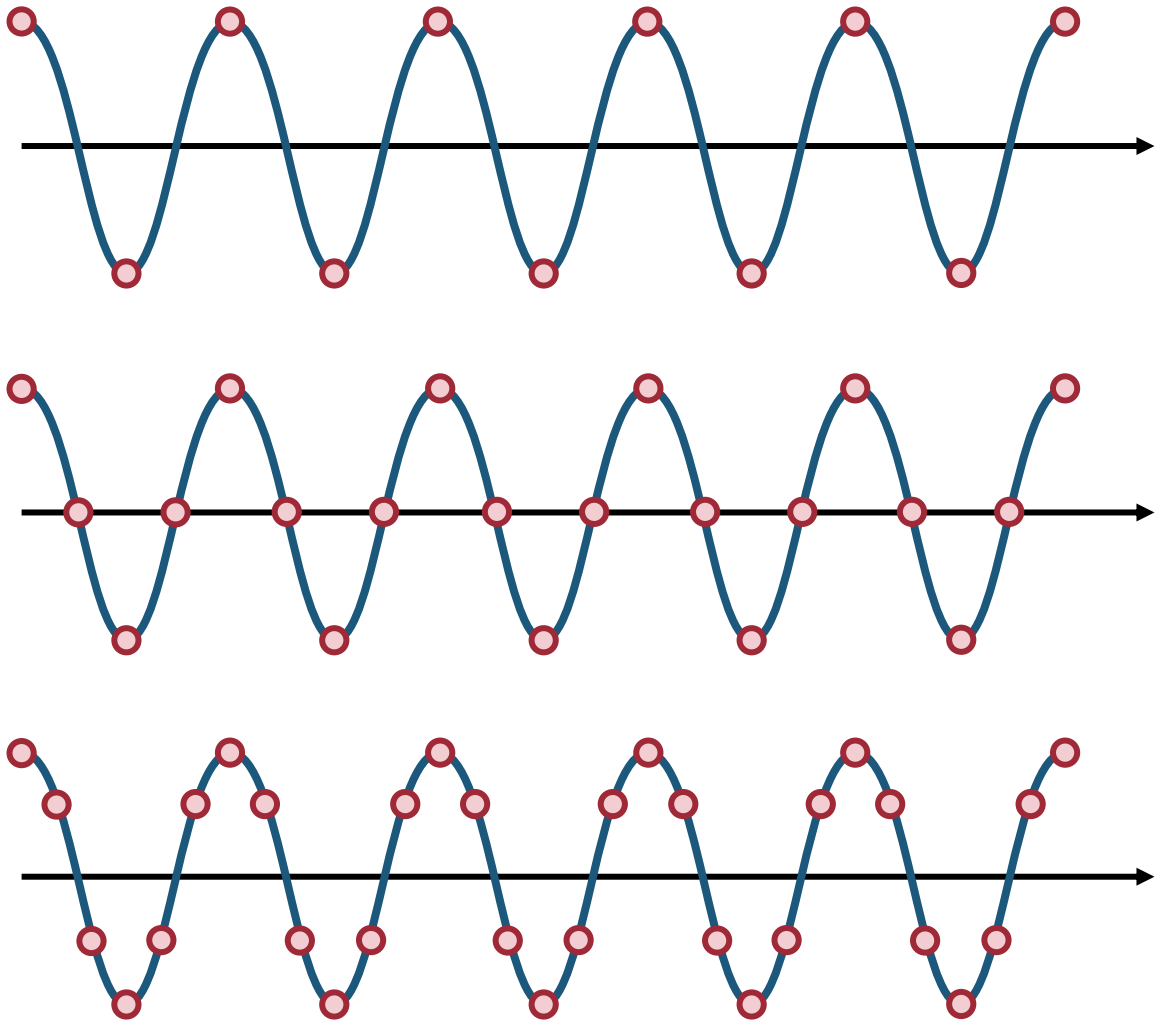


Sampling Theorem: Oversampling

Critically sampled
$(f_s = 2f_{max})$

Oversampled
$(f_s = 4f_{max})$

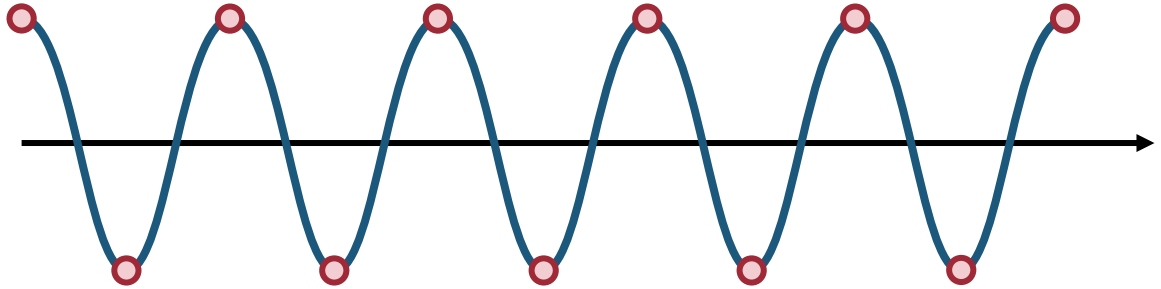
Oversampled
$(f_s = 6f_{max})$



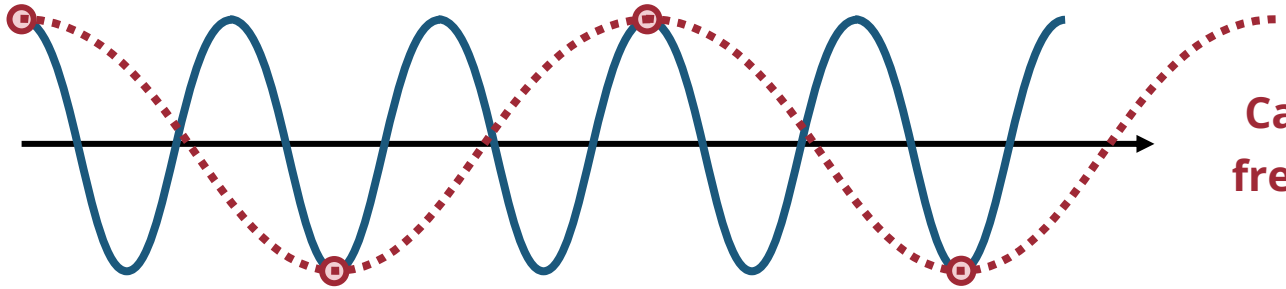
Reconstruction is possible!

Sampling Theorem: Undersampling

Critically sampled
$(f_s = 2f_{max})$

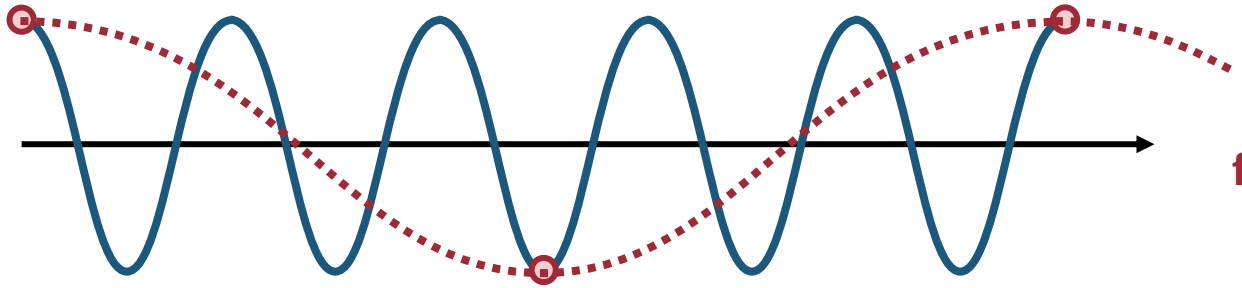


Undersampled
$(f_s = \frac{2}{3} f_{max})$



Can only reconstruct frequency up to $\frac{1}{3} f_{max}$

Undersampled
$(f_s = \frac{2}{5} f_{max})$



Can only reconstruct frequency up to $\frac{1}{3} f_{max}$

🤔 Sampling Theorem

- **Telephone audio** is sampled at **8 kHz**. What is the maximum frequency it can reconstruct?
  - **4 kHz**

- To cover the **human hearing range of 20 Hz to 20 kHz**, what is the minimum sampling rate required?
  - **40 kHz**

Sampling Rate & Frequency Range

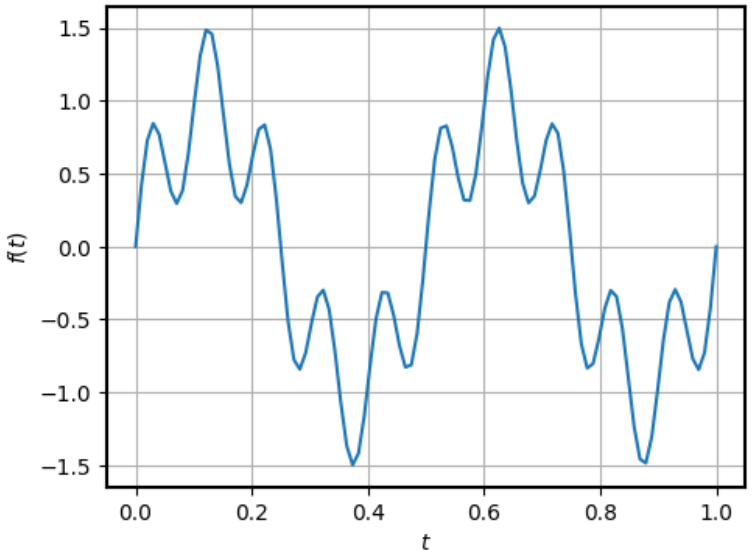
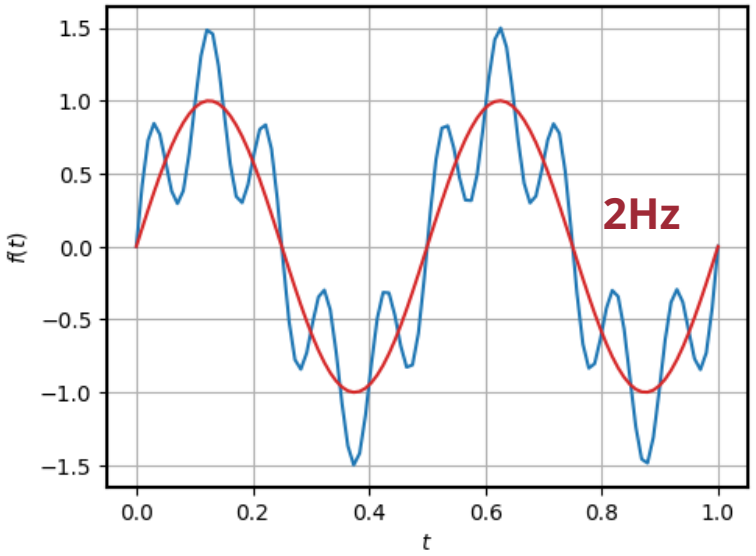
Spectral Analysis

Spectral Analysis

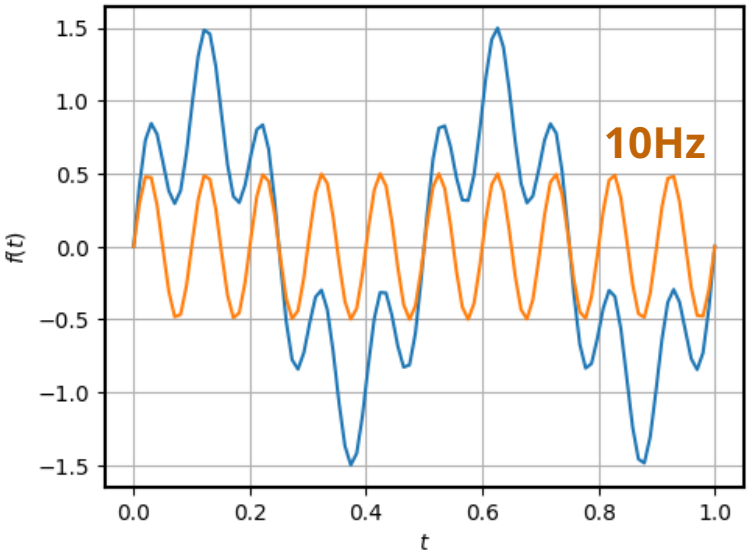
- **Goal**: Analyze the **frequency components** of a signal



$$\sin(2 \cdot 2\pi t) + \frac{1}{2}\sin(10 \cdot 2\pi t)$$

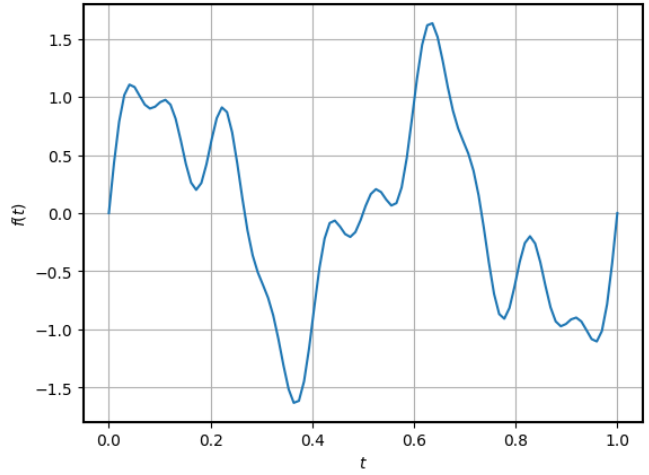


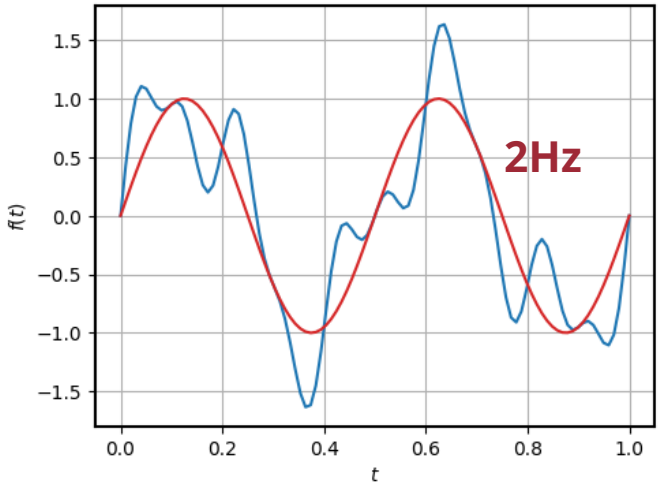
$$\sin(2 \cdot 2\pi t)$$

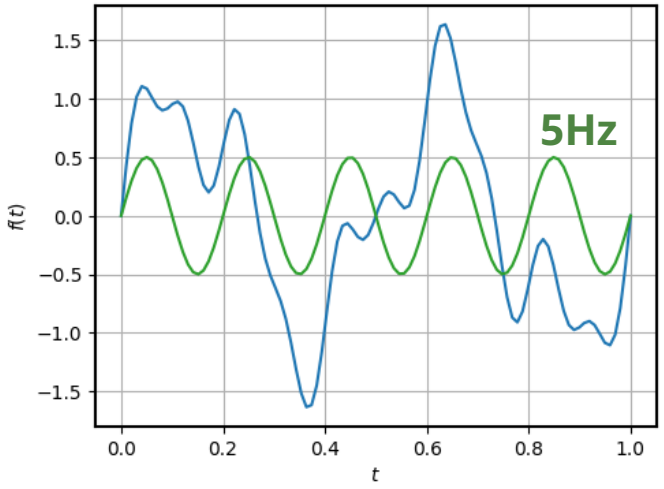


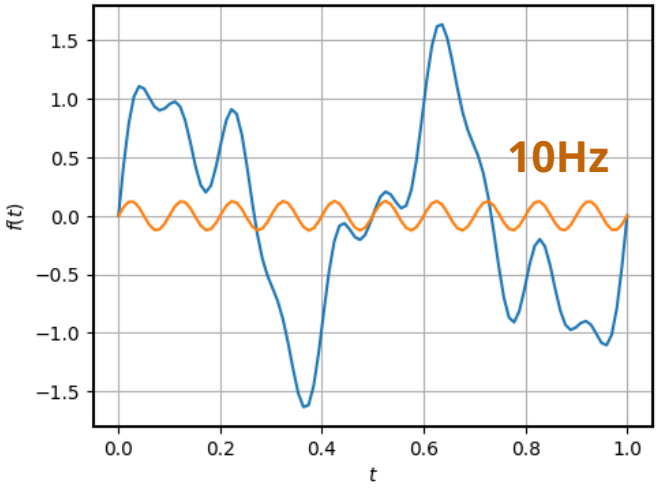
$$\frac{1}{2}\sin(10 \cdot 2\pi t)$$

Spectral Analysis



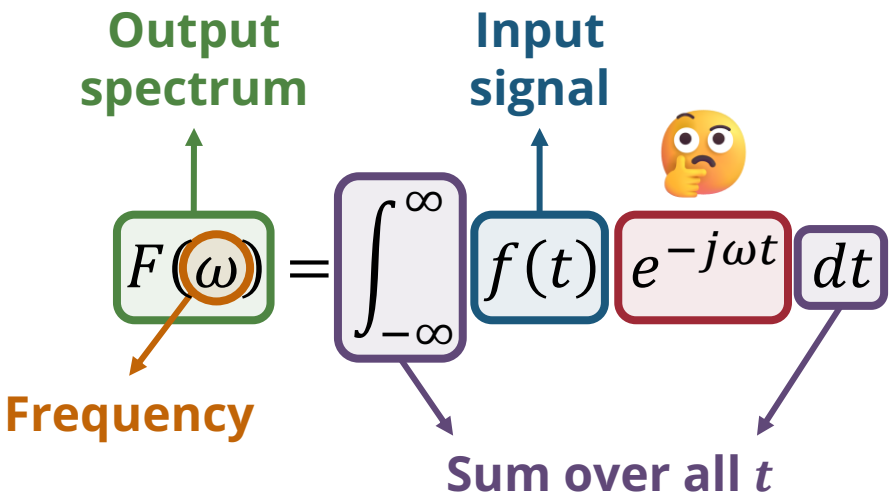






Fourier Transform

- **Intuition**: Decompose time-domain signals into **frequency components**
- Math formulation:



Demystifying Fourier Transform

$$F(\omega) = \int_{-\infty}^{\infty} f(t) \boxed{e^{-j\omega t}} \, dt$$

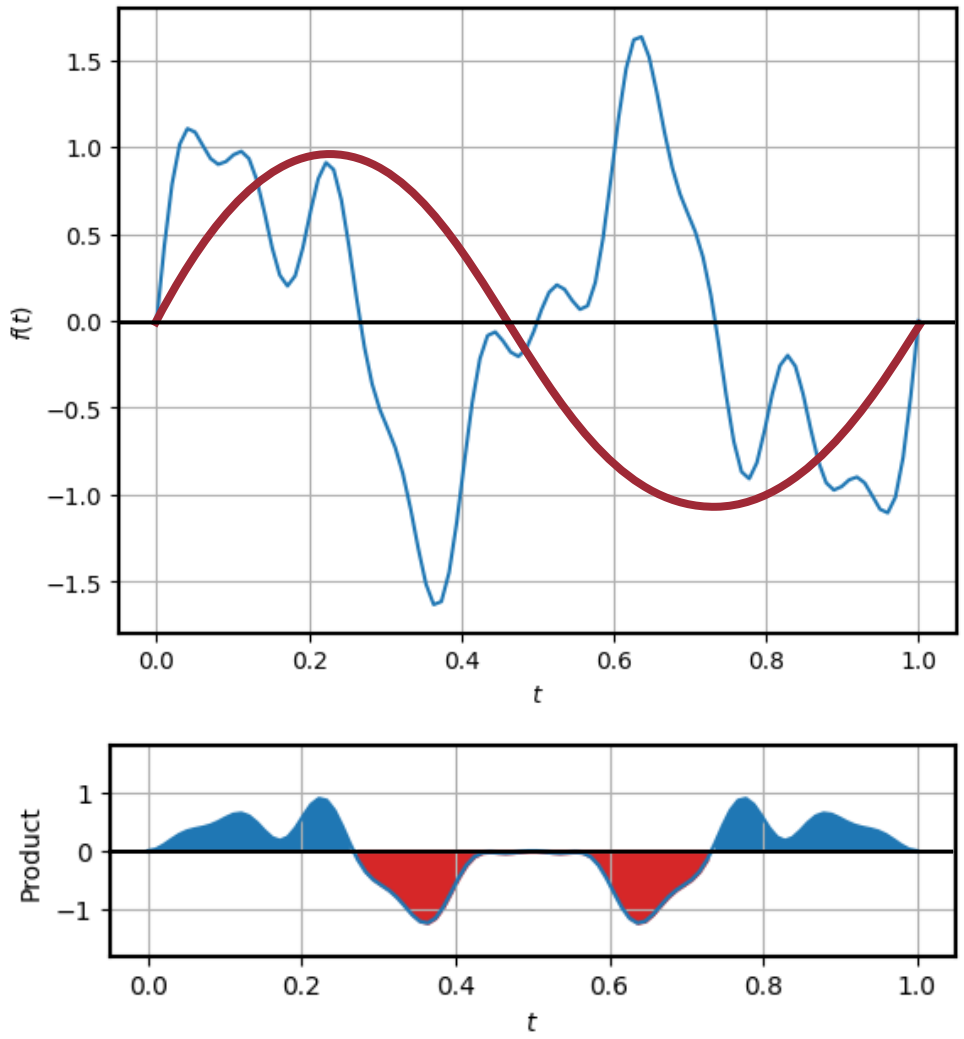
🤔

Euler's formula

$$e^{-j\theta} = \cos\theta + j\sin\theta$$

$$F(\omega) = \int_{-\infty}^{\infty} f(t)\boxed{\cos(-\omega t)} + j\, f(t)\boxed{\sin(-\omega t)} \, dt$$

Demystifying Fourier Transform



Candidate frequency components

Discrete Fourier Transform (DFT)

- **Intuition**: Fourier transform with **discrete time and frequency**
  - Used for **digital audio** → we cannot achieve an infinite sampling rate…
- Math formulation:

$$X_k = \sum_{n=0}^{N-1} x_n \; e^{-j2\pi \frac{k}{N} n}$$

In Practice: Fast Fourier Transform (FFT)

- An efficient implementation of discrete Fourier transform
  - Reduce the complexity from $O(n^2)$ to $O(n \log n)$

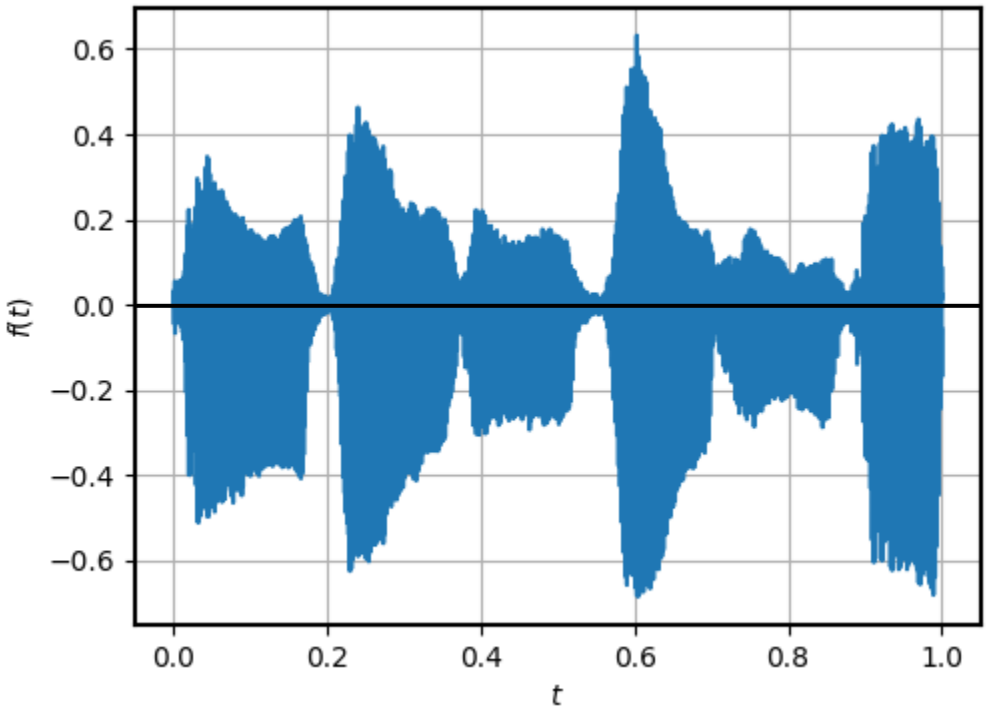
Time-Frequency Analysis

Fourier Transform of a Trumpet Sound

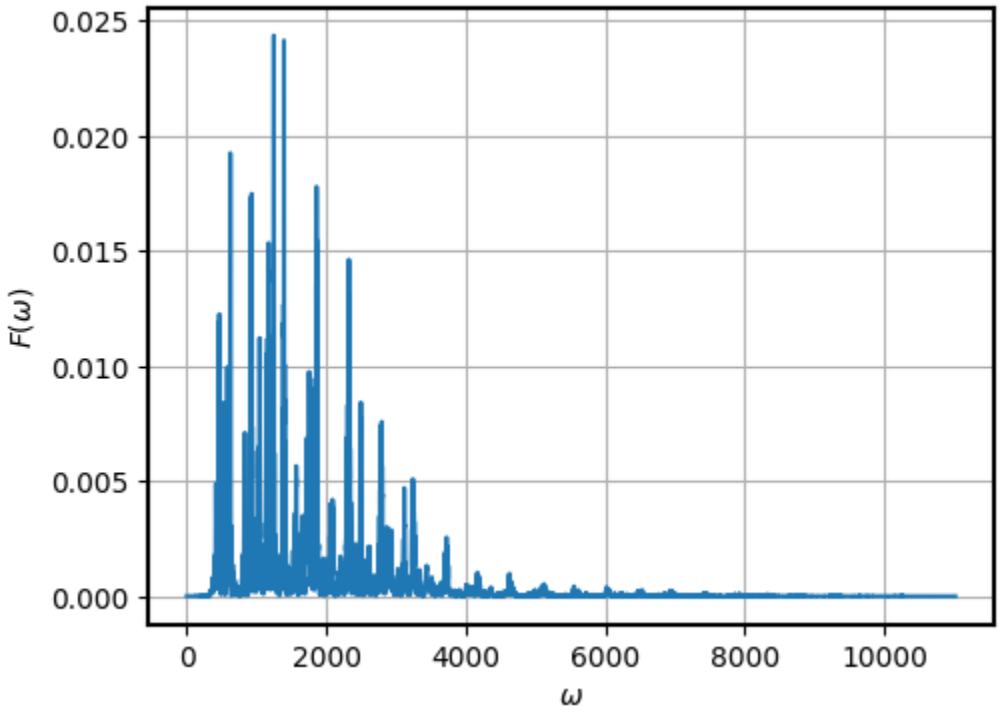
Signal

(time-domain)



Spectrum

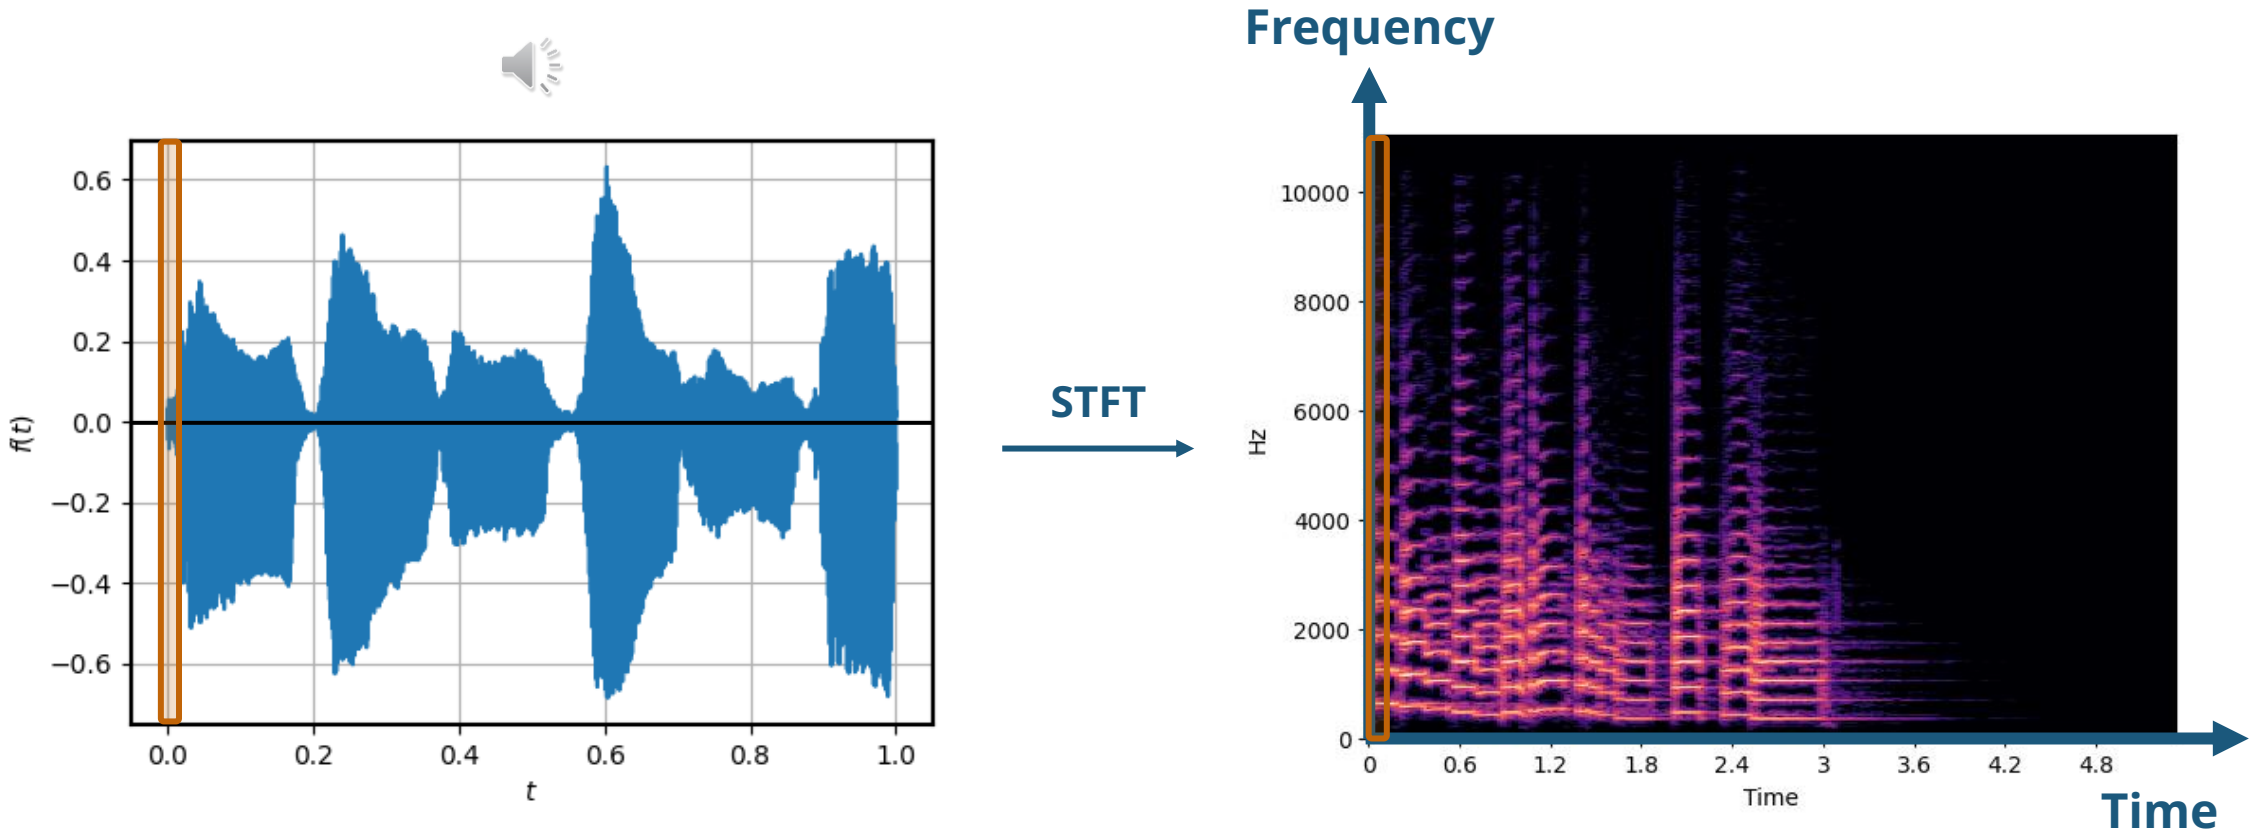
(frequency-domain)



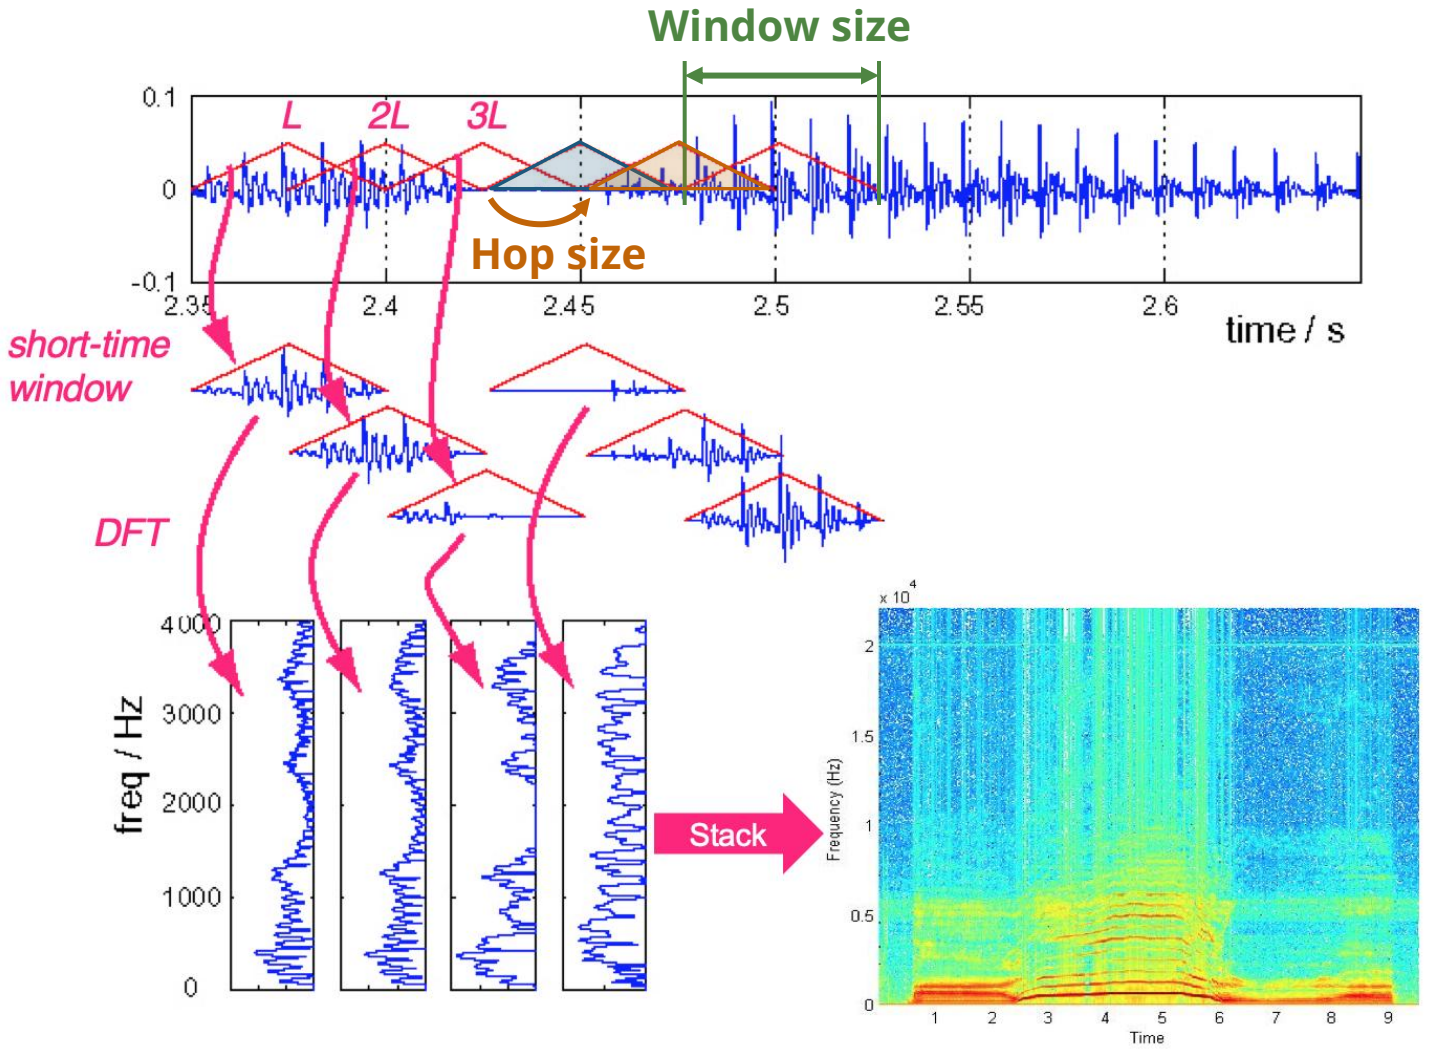
Fourier Transform cannot localize! 😥

Short-Time Fourier Transform (STFT)

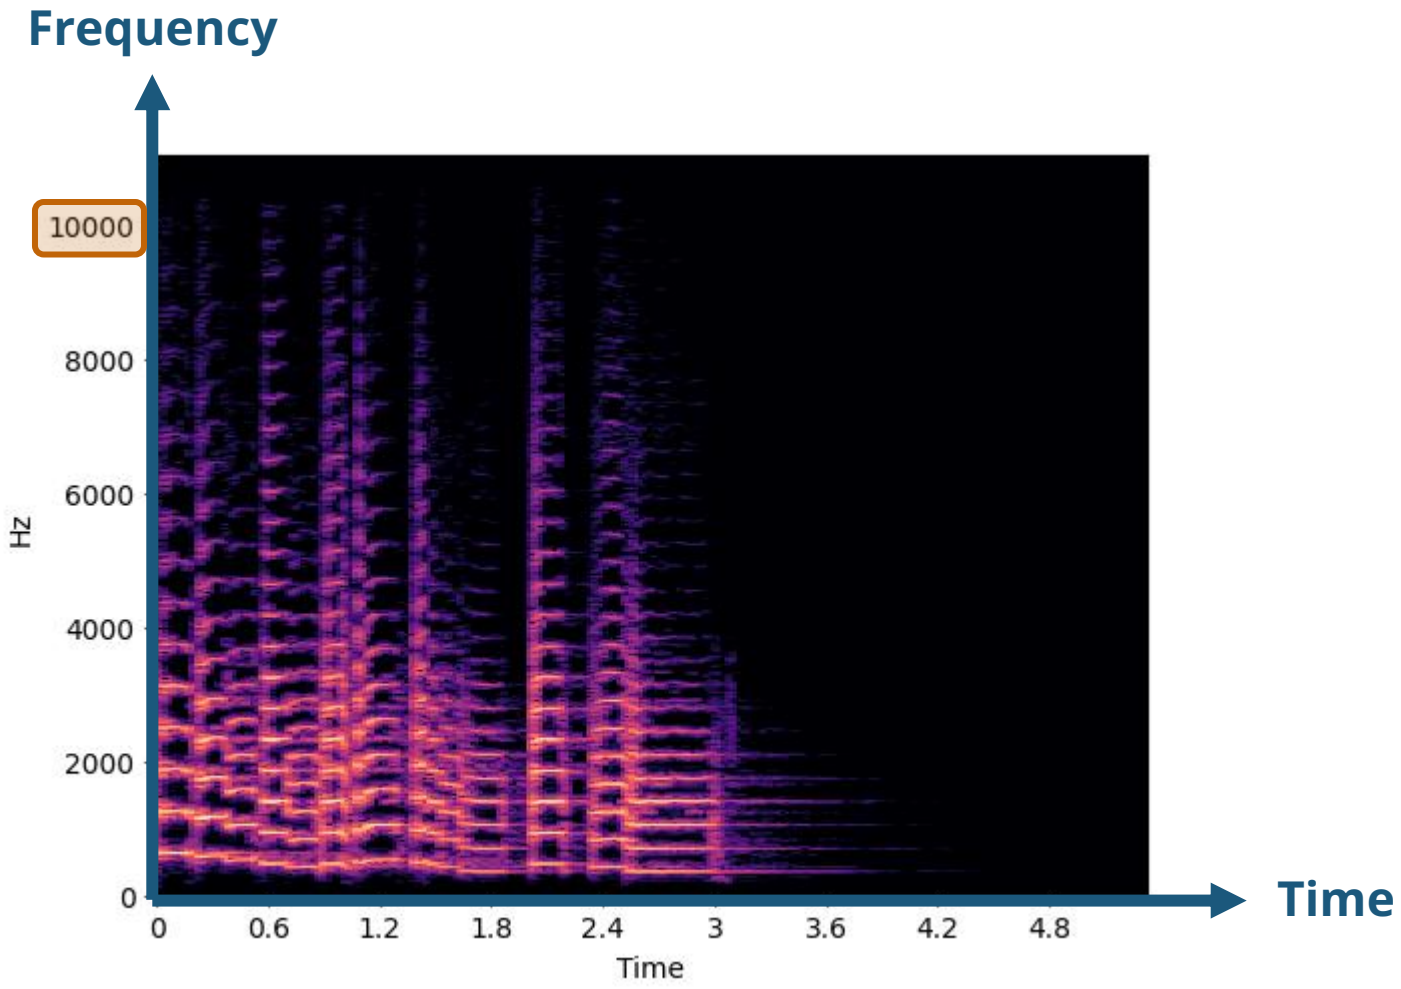
- **Intuition**: Slice the audio into chunks and apply Fourier transform



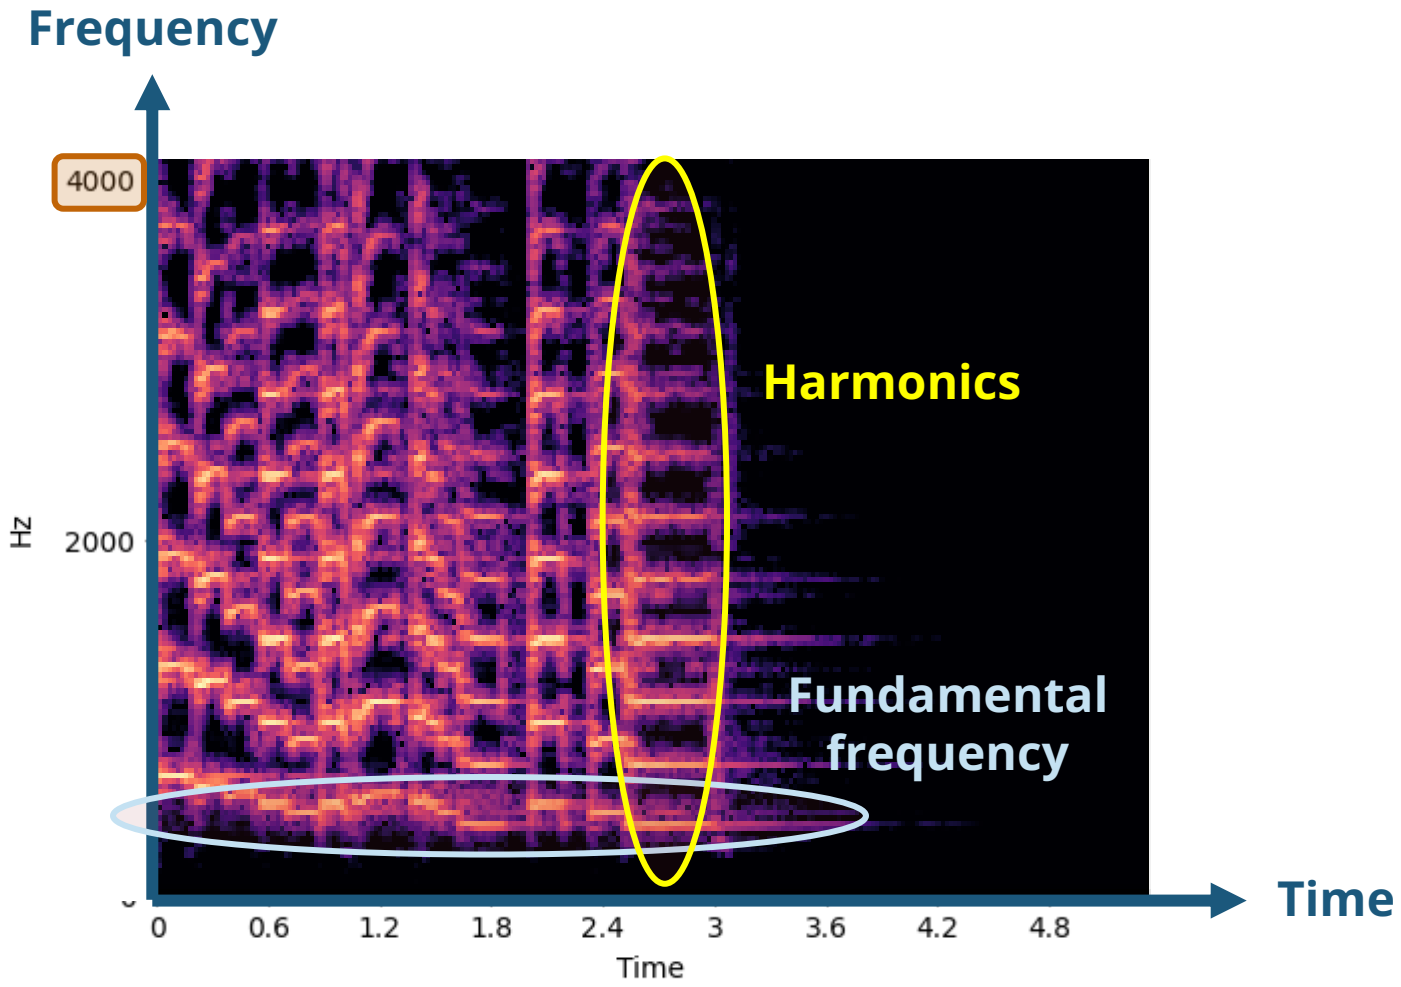
Short-Time Fourier Transform (STFT)



Spectrogram



Spectrogram



Timbre

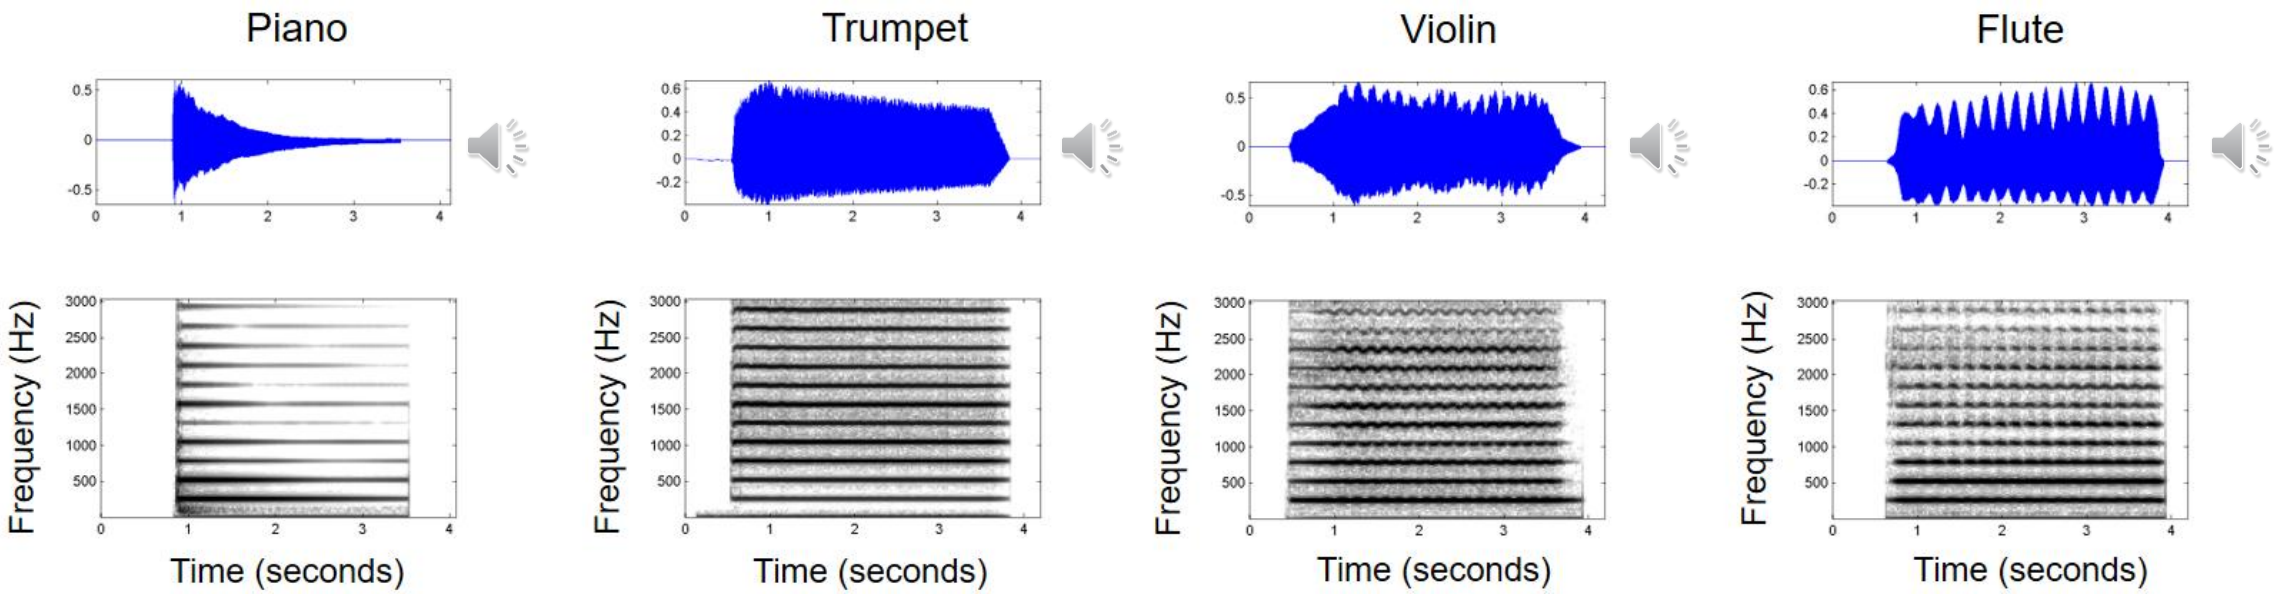


Figure 1.23 from [Müller, FMP, Springer 2015]

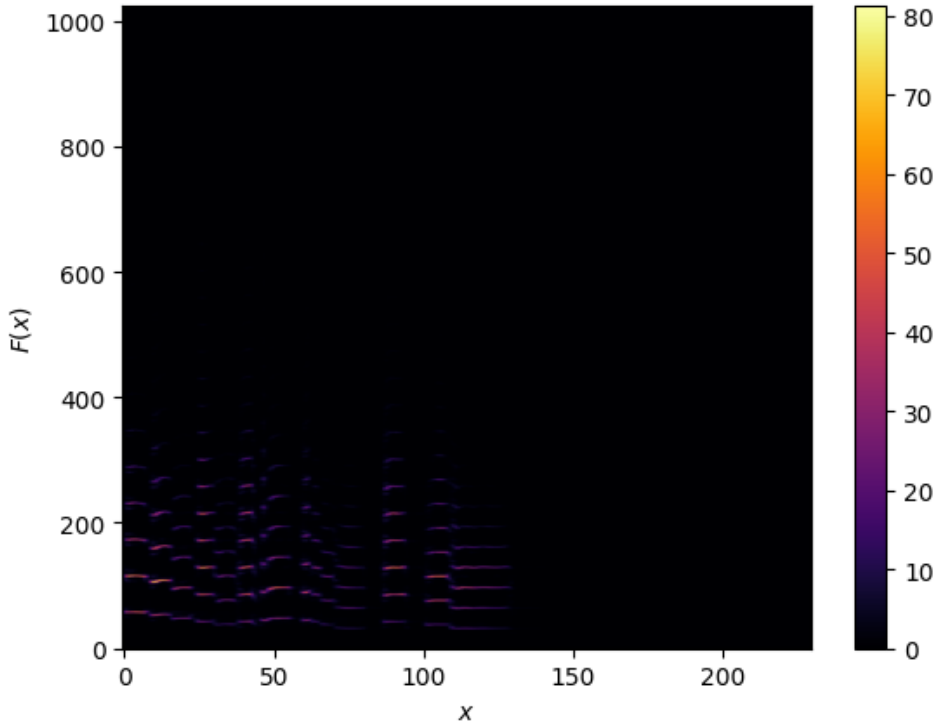
(Source: Müller et al., 2021)

Example: `librosa.stft`

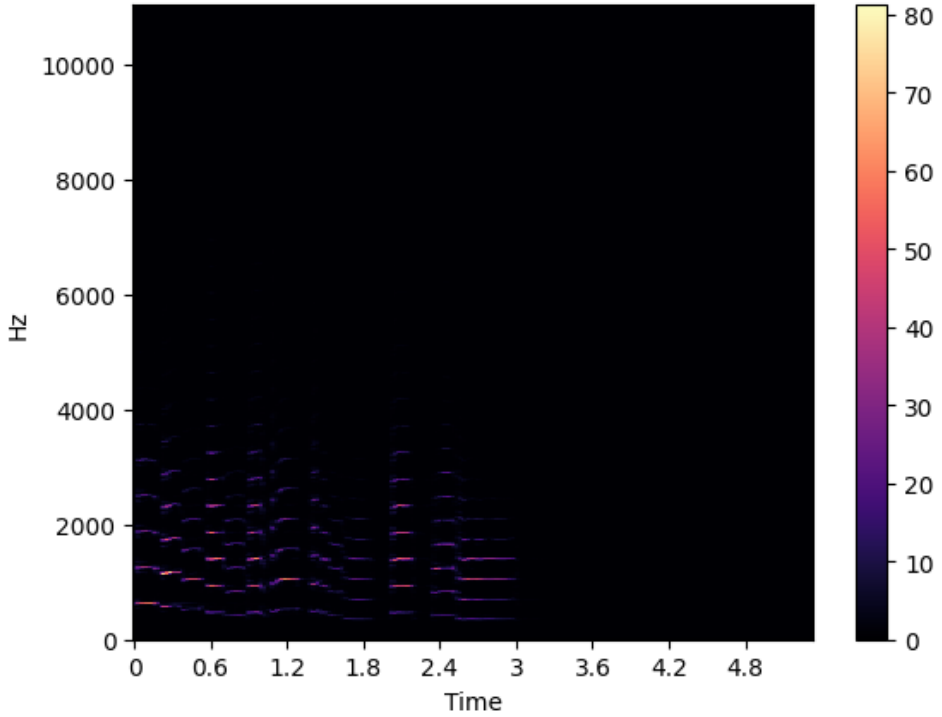


```
# Load the example audio in librosa
y, sr = librosa.load(librosa.example("trumpet"))

# Compute the spectrogram
S = np.abs(librosa.stft(y))

# Plot the spectrogram
im = plt.imshow(S, cmap="inferno", aspect="auto",
                origin="lower")
plt.colorbar(im)
plt.xlabel("Time (sec)")
plt.ylabel("Frequency (Hz))")
plt.show()
```

Example: librosa.display.specshow

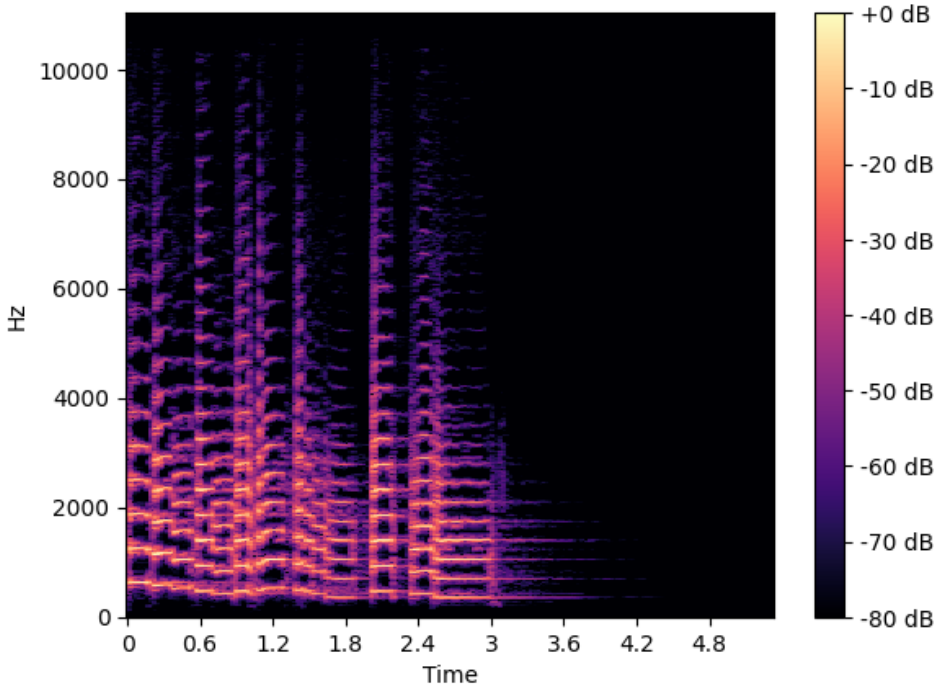


```
# Load the example audio in librosa
y, sr = librosa.load(librosa.example("trumpet"))

# Compute the spectrogram
S = np.abs(librosa.stft(y))

# Plot the spectrogram
im = librosa.display.specshow(S, x_axis="time",
                              y_axis="linear")
plt.colorbar(im)
plt.show()
```

Example: librosa.amplitude_to_db



```
# Load the example audio in librosa
y, sr = librosa.load(librosa.example("trumpet"))

# Compute the spectrogram
S = np.abs(librosa.stft(y))
S_db = librosa.amplitude_to_db(S, ref=np.max)

# Plot the spectrogram
im = librosa.display.specshow(S_db, x_axis="time",
                              y_axis="linear")
plt.colorbar(im, format="%+2.0f dB")
plt.show()
```

🔥 **PA2**: Spectral Analysis

- Instructions will be sent by **emails** and released on the **course website**
- Use **librosa** to process audio files
  - Fast Fourier transform (**FFT**)
  - Short-time Fourier transform (**STFT**)
