PAT 498/598 (Winter 2025)

Music & AI

Lecture 14: Language-based Music Generation

Instructor: Hao-Wen Dong

SCHOOL OF MUSIC, THEATRE & DANCE
PERFORMING ARTS TECHNOLOGY
UNIVERSITY OF MICHIGAN

Homework 5: AI Song Contest

- Please listen to the **ten finalists of AI Song Contest 2024**
- **Read the about pages** by clicking the cover arts
- **Answer the following questions** (in 5-10 sentences each)
  - **Which is your favorite song**?
  - Following Q1, **what did they do well**?
  - Following Q1, **what can be improved**?
  - Based on the ten finalists, **what tasks are easy** for current AI in music production?
  - Based on the ten finalists, **what tasks are difficult** for current AI in music production?

Homework 5: AI Song Contest

- Instructions will be released on the course website
- Please submit your work to Gradescope
- Due at **11:59pm ET** on **March 14**
- Late submissions: **1 point deducted per day**
- No late submission is allowed a week after the due date

Project

- **Open-ended group project** (group size: 2–3)
  - **Building a new AI music tool** **or** **Exploring creative & artistic use of AI tools**
- **Milestones**
  - **Pitch**: Mar 19
  - **Presentation**: Apr 21
  - **Final report**: Apr 28
- Due at **11:59pm ET** on the date specified
- **No late submissions!** Submit your work early and update it later.

Project Pitch

- Brief 10-min presentation
  - **Team member introduction**
  - **Topic**: What do you want to work on?
  - **Topic**: Who is the target audience/user/customer/reader?
  - **Methodology**: How are you going to approach it?
  - **Methodology**: What are the tools (programming languages, platforms, plugins, hardware, etc.) that you'll be using?
  - **Expected results**: What are the expected deliverables (e.g., an instrument, a plugin, a web/mobile app, a standalone software, an installation, a performance, a composition)?
  - **Planning**: What are the milestones? What do you expect to achieve by the end of February and March?

Project Pitch

- Send me an email with the following info by **11:59 PM ET on March 19**
  - **Names and U-M IDs of all team members**
  - **Topic**: What do you want to work on?
  - **Topic**: Who is the target audience/user/customer/reader?
  - **Methodology**: How are you going to approach it?
  - **Methodology**: What are the tools (programming languages, platforms, plugins, hardware, etc.) that you'll be using?
  - **Expected results**: What are the expected deliverables (e.g., an instrument, a plugin, a web/mobile app, a standalone software, an installation, a performance, a composition)?
  - **Planning**: What are the milestones? What do you expect to achieve by the end of February and March?

AI Song Contest

AI Song Contest

- Annual international competition showcasing the **creative potential of human–AI co-creativity in the songwriting process**

aisongcontest.com

Yaboi Hanoi – Entering Demons & Gods (2022)

youtu.be/PbrRoR3nEVw

soundcloud.com/yaboihanoi/enter-demons-and-gods

Reading: The Making of Entering Demons & Gods (2022)

“**It was like a saxophonist trained in classical Thai motifs, who played a special ‘Thai Edition’ saxophone with Phi Nai tunings, had joined the musical conversation.** The same was true with the trumpet model and the ขลุ่ย ‘Khlui’ - a flute from Thai, Laos and Cambodian repertoire. I could assemble a **transcultural ensemble** to expand the sonic palette of Thai motifs, whilst adhering to underlying tunings and idiomatic inflections like never before.”

lamtharnhantrakul.github.io/enter-demons-and-gods/

Synthetic Beat Brigade - How would you touch me? (2023)

youtu.be/O4cJ3acEGDw &
drive.google.com/file/d/1QTQ7P3iZI6I0anIwNQ3ewf8g3JjDjesl/view

Synthetic Beat Brigade - How would you touch me? (2023)

- **Ideation**: Spotify API, ChatGPT, Facebook Llama, Google Bison
- **Lyrics**: ChatGPT 2, Genius API
- **Composition**: AI Drummachine, Mofi, Tonetrasnfer, This patch does not exist, Albeatz, BaiscPitch, Magenta, AIVA, MuseNet
- **Vocals**: Soundly Voice Designer, Vocal Remove, Voice characteristics
- **Mastering**: Landr
- **Cover art, bandart**: Midjourney
- **Clip**: ComfyUI for Stable Diffusion + ControlNet

Reading: The Making of How would you touch me? (2023)

"This project is a collaboration between **Artificial Intelligence (AI) enthusiasts in four fields: artist management, music and post-production, tech, and creative**. In contrast, the majority of the music industry sees AI as a threat. Our team understands that these technological advances will have a significant impact on how we produce music. Because of this, we have decided to **use AI for every step of the production process**. From ideation to creating the lyrics to producing the music."

drive.google.com/file/d/1QTQ7P3iZI6I0anIwNQ3ewf8g3JjDjesl/view

Symbolic Music Generation

Four Paradigms of Music Generation

Symbolic music generation

Text-based

Image-based

Audio-domain music generation

Time series-based

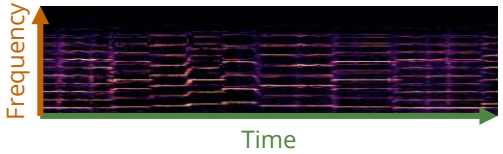
Image-based

```
Program_change_0,
Note_on_60, Time_shift_2, Note_off_60,
Note_on_60, Time_shift_2, Note_off_60,
Note_on_76, Time_shift_2, Note_off_67,
Note_on_67, Time_shift_2, Note_off_67,
...
```

MIDI

Piano roll

Waveform



Spectrogram

Today, we also have many latent-space based systems!

Topics of Symbolic Music Generation

Unconditional

Symbolic music generation

- ∅ → melody
- ∅ → lead sheet (Melody & chords)
- ∅ → sheet music

Today's topic!

Conditional

Automatic arrangement

- Melody → lead sheet
- Melody → multitrack
- Lead sheet → multitrack
- Solo → multitrack
- Multitrack → simple version

Performance rendering

- Sheet music → performance

Improvisation systems

- Performance → performance

Multimodal

X-to-music generation

- Text → sheet music
- Video → sheet music
- X → sheet music

Two Paradigms of Symbolic Music Generation

Text-based

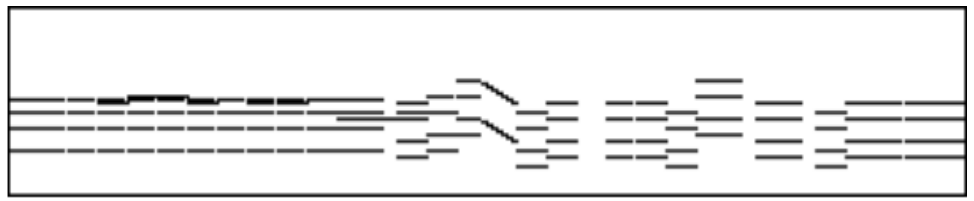
- Treat music like **text**
- Sharing models with **natural language processing (NLP)**
  - RNNs, LSTMs, Transformers, etc.

Today's topic!

```
Program_change_0,
Note_on_60, Time_shift_2, Note_off_60,
Note_on_60, Time_shift_2, Note_off_60,
Note_on_76, Time_shift_2, Note_off_67,
Note_on_67, Time_shift_2, Note_off_67, ...
```

Image-based

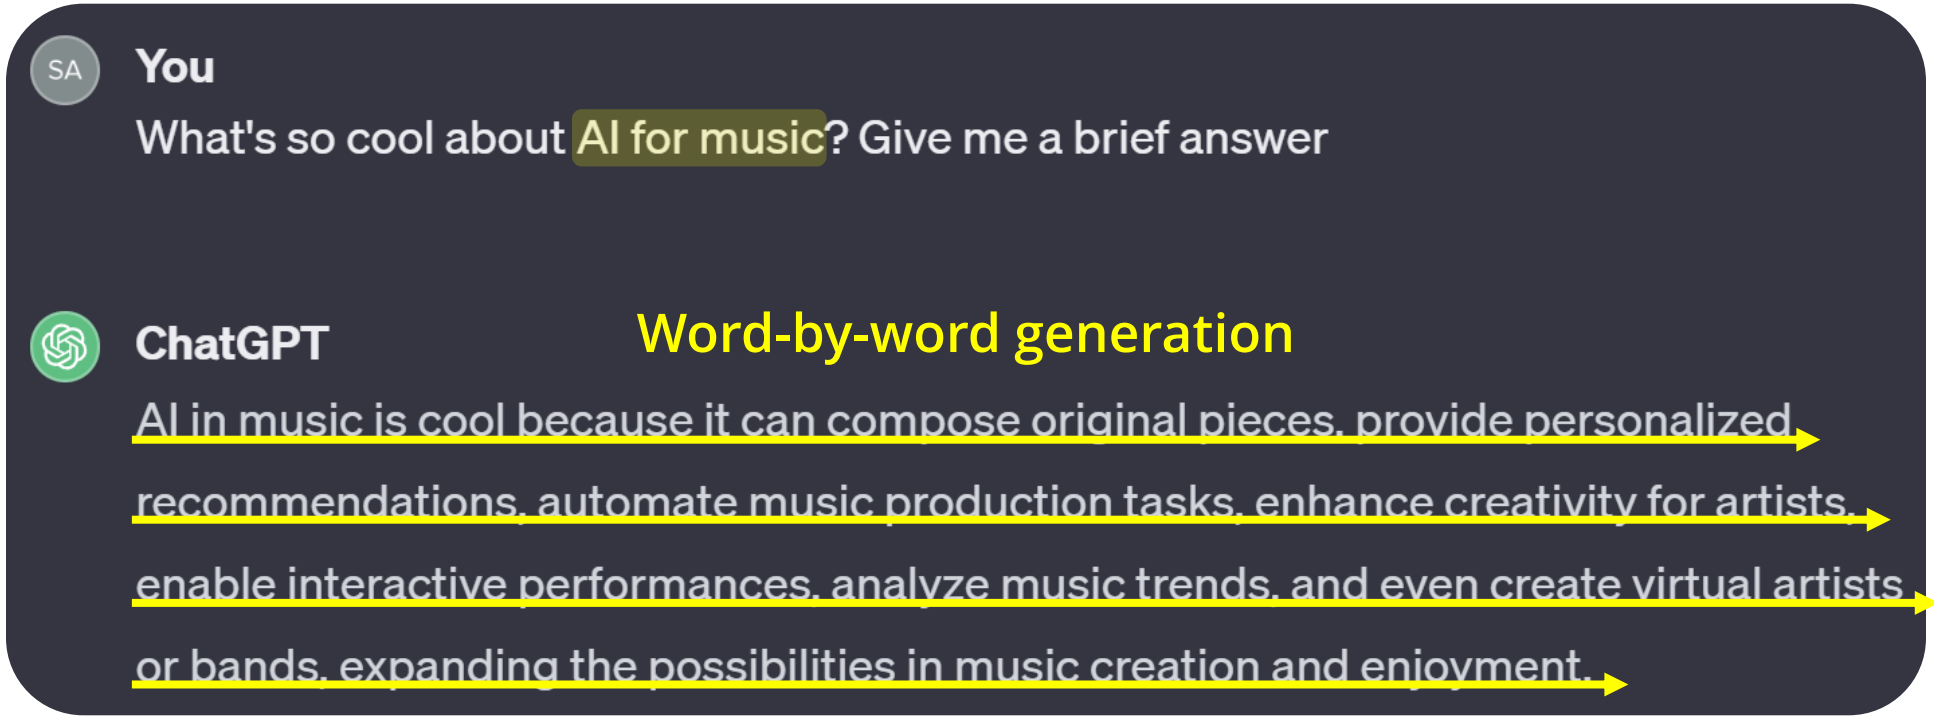
- Treat music like **images**
- Sharing models with **computer vision (CV)**
  - GANs, VAEs, diffusion models, etc.



Generating Music like Languages

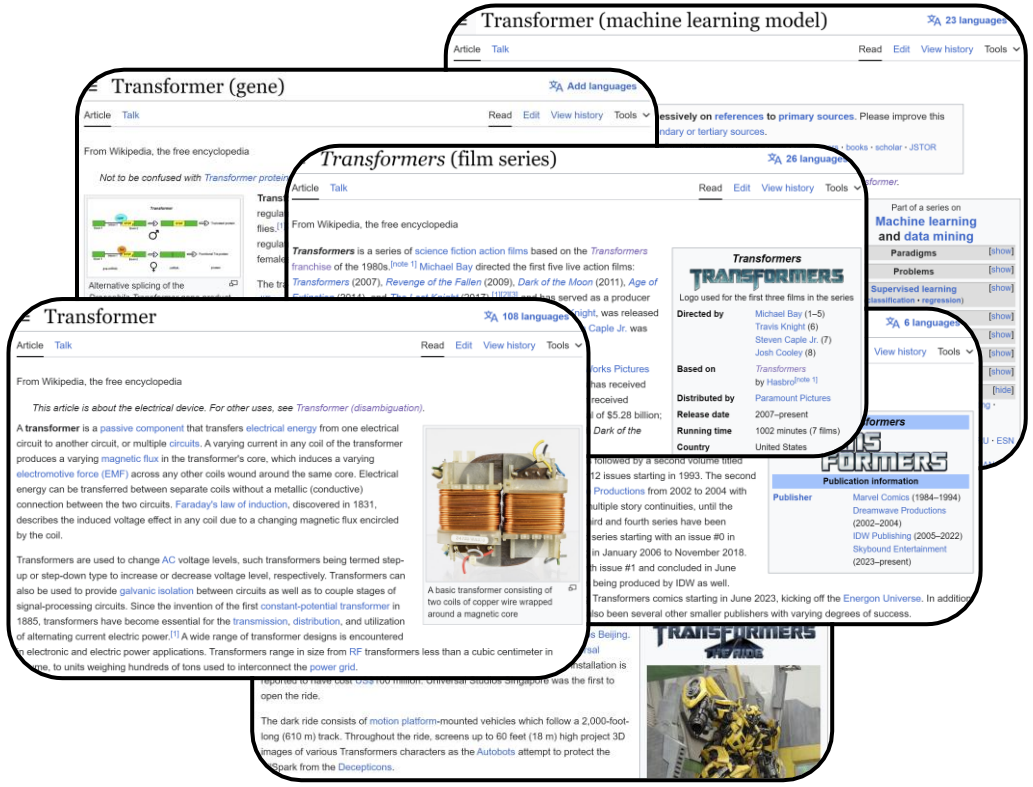
Large Language Models (LLMs)

- The models behind ChatGPT!

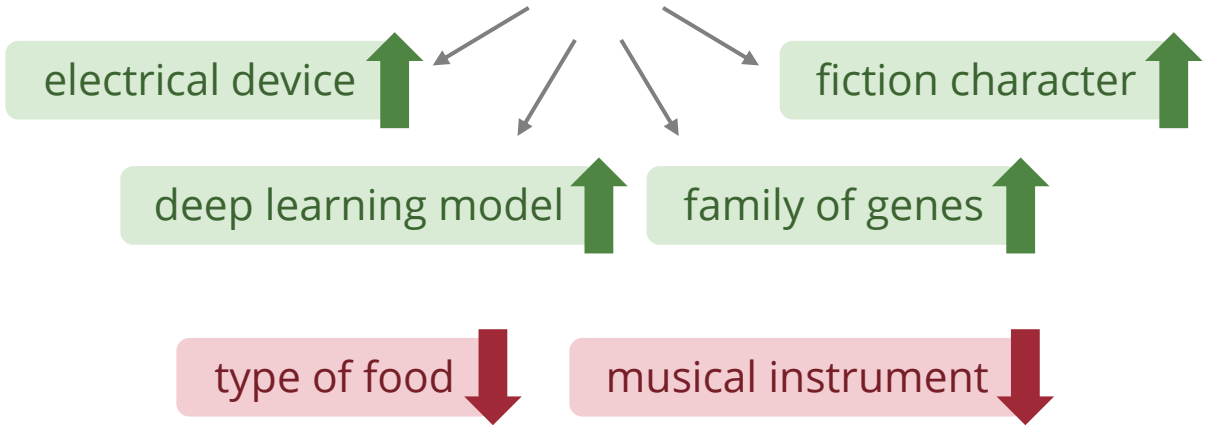


Language Models

- Predicting the next word given the past sequence of words



A transformer is a _____



Language Models (Mathematically)

- A class of machine learning models that learn the next word probability

$$P(\ x_i \mid \underbrace{x_1, x_2, \ldots, x_{i-1}}\ )$$

Next word — Previous words

$P(\ \text{electrical} \mid \text{A transformer is a}\ )$ ↑

$P(\ \text{character} \mid \text{A transformer is a}\ )$ ↑

$P(\ \text{gene} \mid \text{A transformer is a}\ )$ ↑

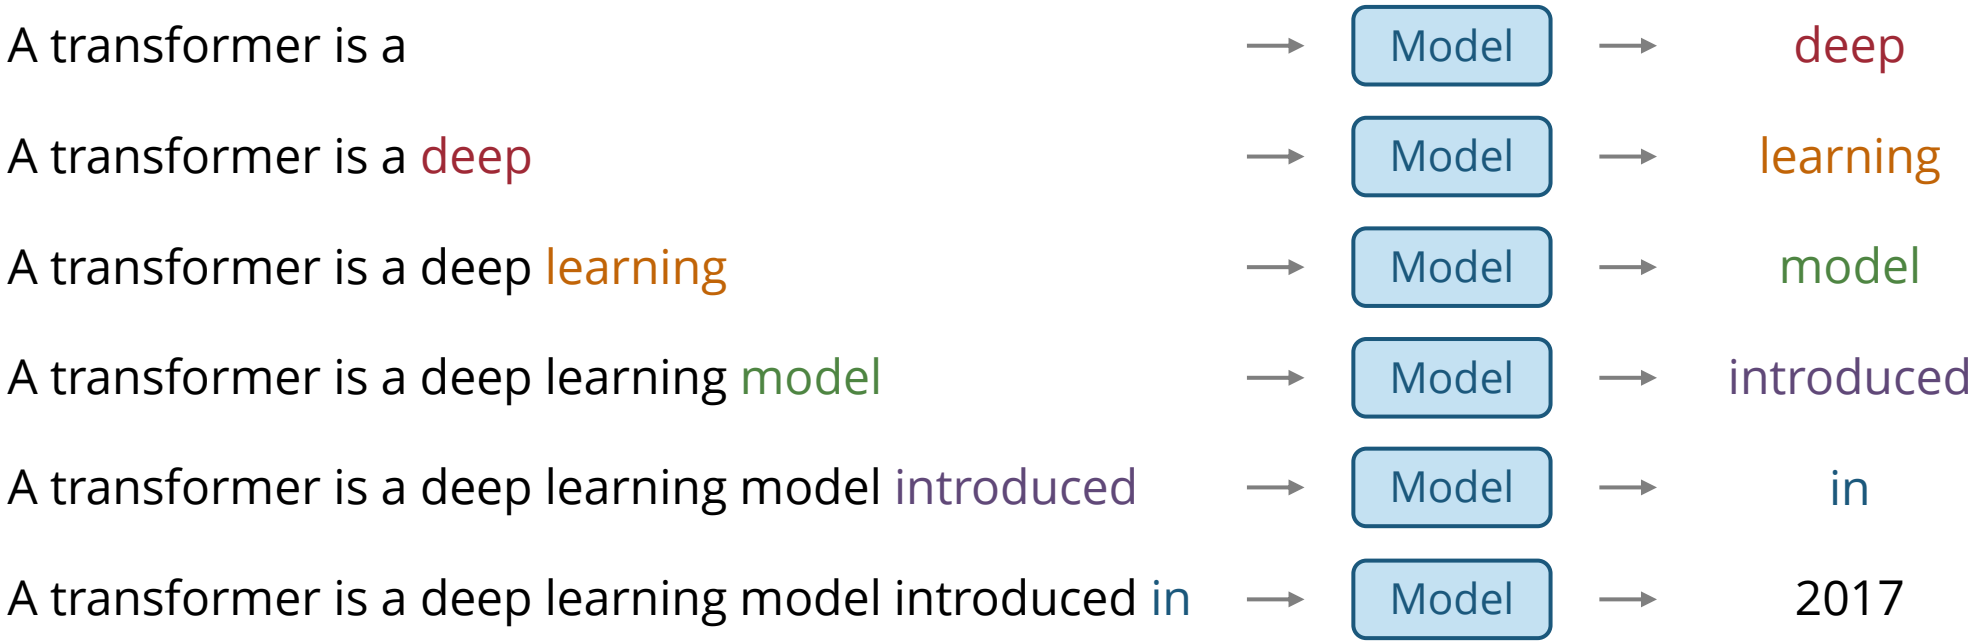
$P(\ \text{model} \mid \text{A transformer is a}\ )$ ↑

$P(\ \text{food} \mid \text{A transformer is a}\ )$ ↓

$P(\ \text{musical} \mid \text{A transformer is a}\ )$ ↓

Language Models – Generation

- How do we generate a new sentence using a trained language model?



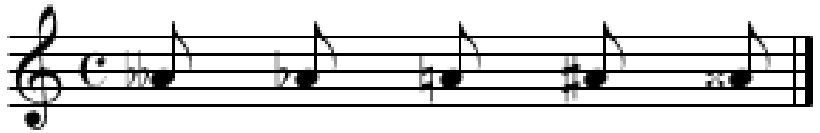
Designing a Machine-readable Music Language

- How can we "represent" music in a way that machines understand?
  - Musical representation is a key component of a music generation system
- Why not using sheet music "images" directly?
  - Machines still have a hard time reading sheet music
  - A challenging task known as "optical music recognition" (OMR)
- Examples:
  - ABC notation
  - MIDI

ABC Notation-based Representation

(Recap) ABC Notation

- A simple text-based notation
- Use letters to denote pitches
  - Lower octave (A–G), higher octave (a–g)
- Use prefix to denote accidentals
  - Sharp (^), flat (_), natural (=)



__A _A =A ^A ^^A

C, D, E, F,|G, A, B, C| D E F G | A B c d | e f g a | b c' d' e'| f' g' a' b'

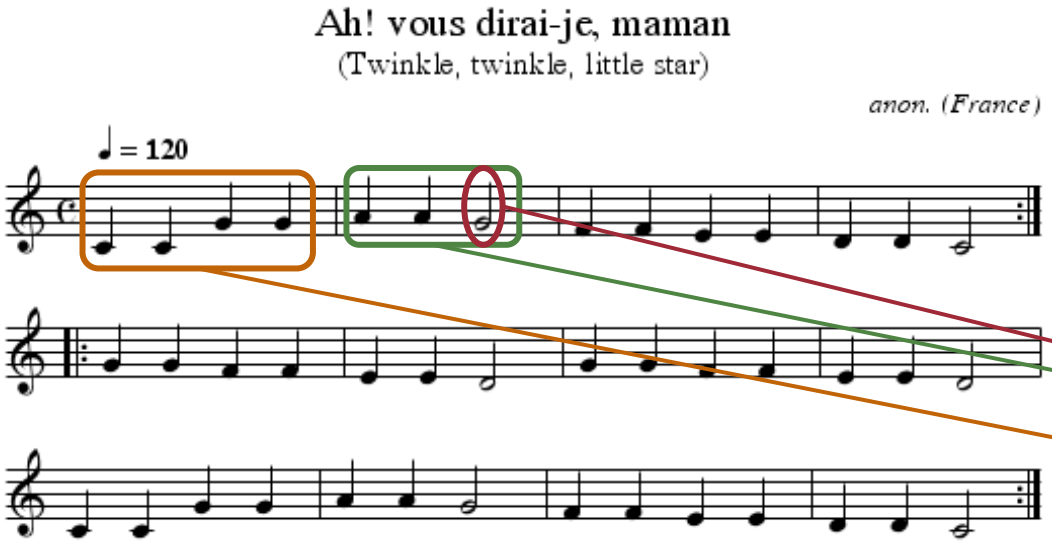
abcnotation.com/examples

(Recap) What is this song in ABC notation?

```
CCGG|AAG2|FFEE|DDC2:|
|:GGFF|EED2|GGFF|EED2|
CCGG|AAG2|FFEE|DDC2:|
```

Twinkle, twinkle, little star!

(Recap) An Example of ABC Notation



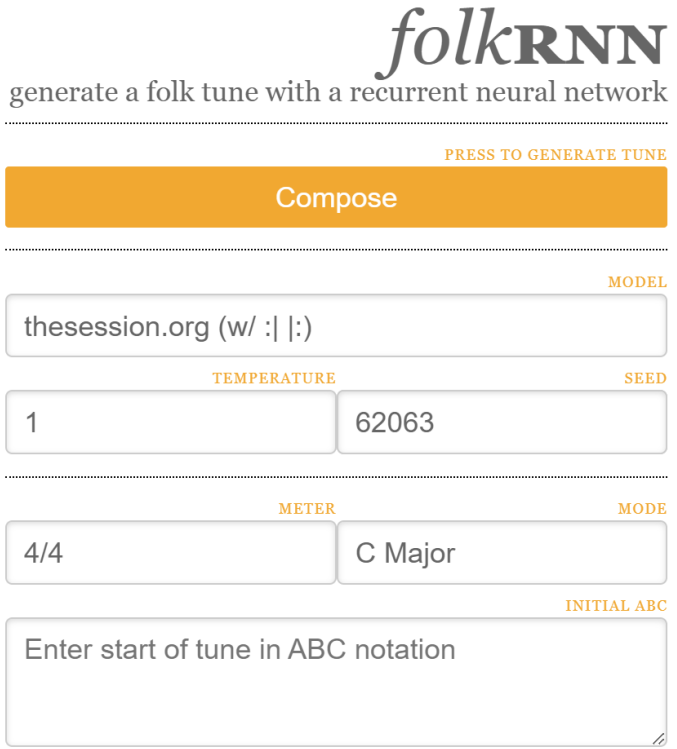
Metadata

```
X:571
T:Ah! vous dirai-je, maman
T:(Twinkle, twinkle, little star)
C:anon.
O:France
R:Nursery song
M:C  Meter
L:1/4  Unit note length (temporal resolution)
Q:120  Tempo
K:C  Key
CCGG|AAG2|FFEE|DDC2:|
|:GGFF|EED2|GGFF|EED2|
CCGG|AAG2|FFEE|DDC2:|
```

abcnotation.com/tunePage?a=trillian.mit.edu/~jc/music/abc/mirror/musicaviva.com/france/ah-vous-c/ah-vous-c-1/0000

Example System: Folk RNN (Sturm et al., 2015)

- **Data**
  - Collections of folk tunes
- **Representation**
  - ABC notation without metadata
- **Model**
  - LSTM (long short-term memory)
  - Working on the character level

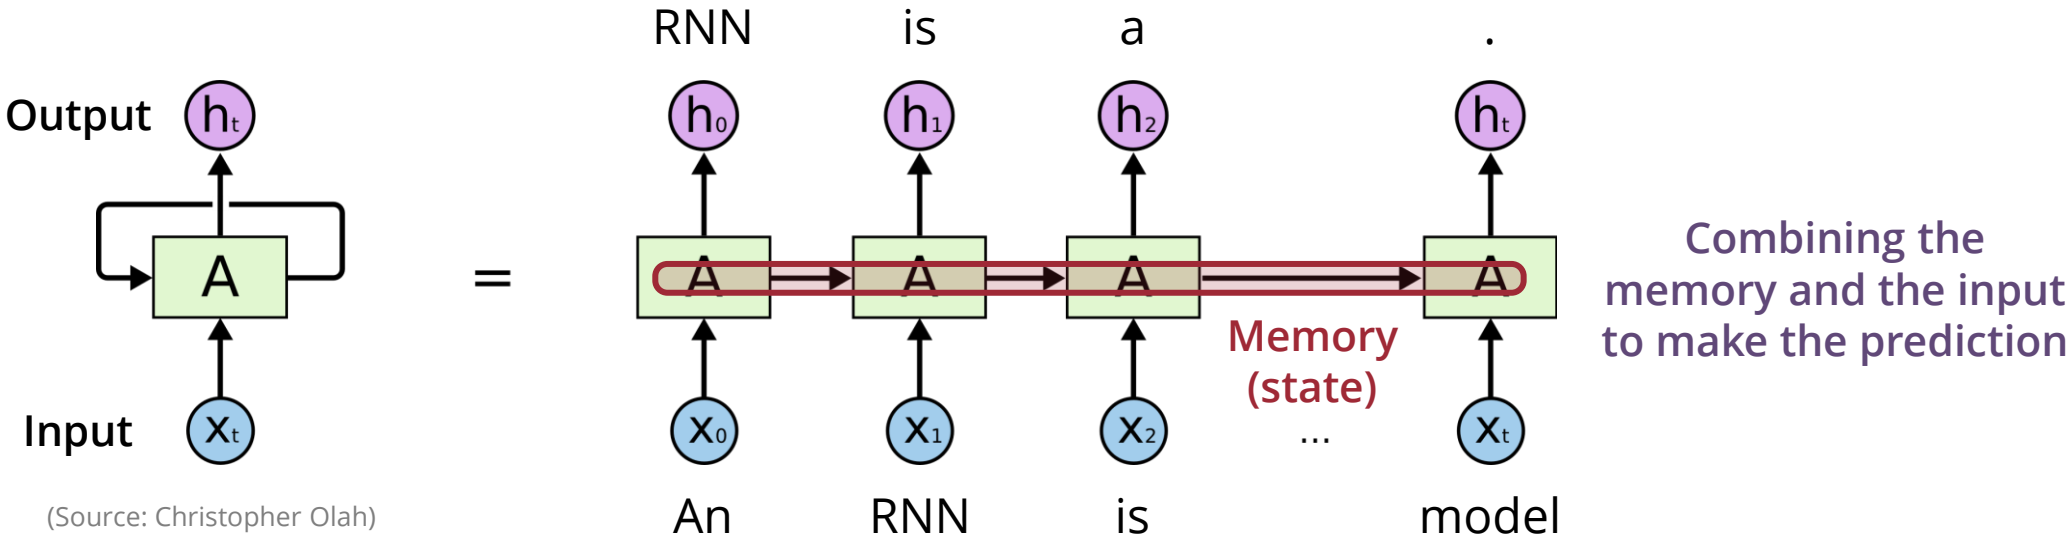


folkrnn.org

Bob L. Sturm, Joao Felipe Santos, and Iryna Korshunova, "Folk Music Style Modelling by Recurrent Neural Networks with Long Short Term Memory Units," *ISMIR Late-Breaking Demos*, 2015.

What is an RNN (Recurrent Neural Network)?

- A type of neural networks that have **loops**
- Widely used for **modeling sequences** (e.g., in natural language processing)

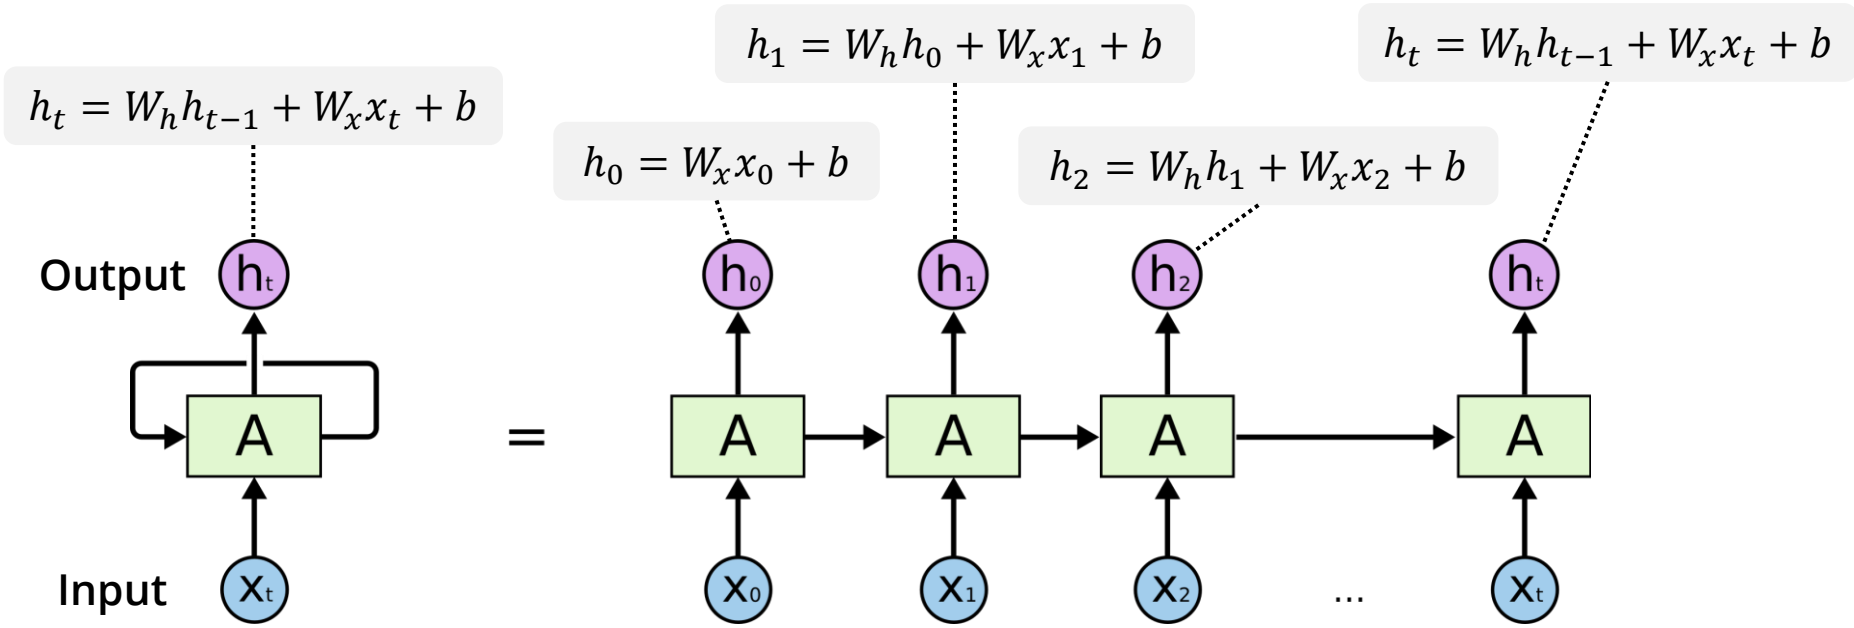


(Source: Christopher Olah)

colah.github.io/posts/2015-08-Understanding-LSTMs/

Vanilla RNNs

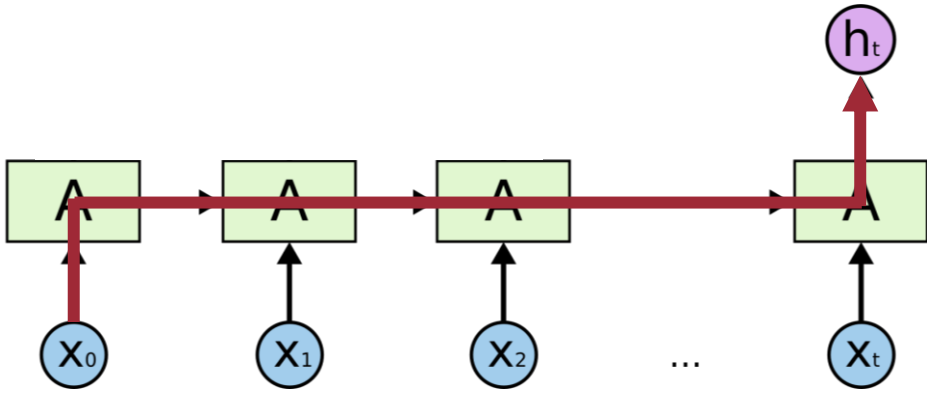
- The simplest form of RNNs
- LSTMs and GRUs are also RNNs



(Source: Christopher Olah)

Backpropagation Through Time

- An RNN is essentially a **very deep neural network**



$$h_t = W_h h_{t-1} + W_x x_t + b$$

$$h_t = W_h(W_h h_{t-2} + W_x x_{t-1} + b\ ) + W_x x_t + +b$$

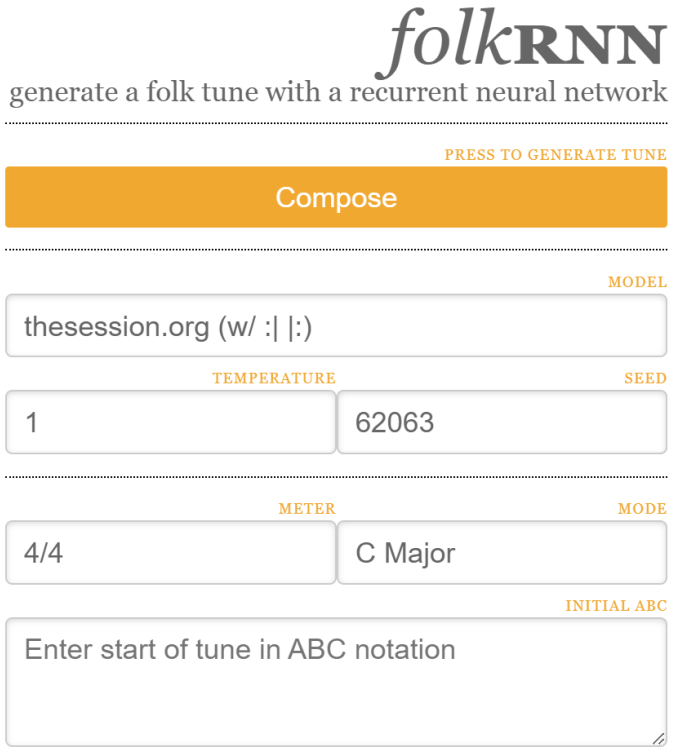
$$\vdots$$

$$h_t = W_h(W_x x_{t-1} + W_h(\ \cdots\ \ W_h h_0 + W_x x_1 + b\ \ \cdots\ ) + b\ ) + W_x x_t + +b$$

colah.github.io/posts/2015-08-Understanding-LSTMs/

Example: Folk RNN (Sturm et al., 2015)

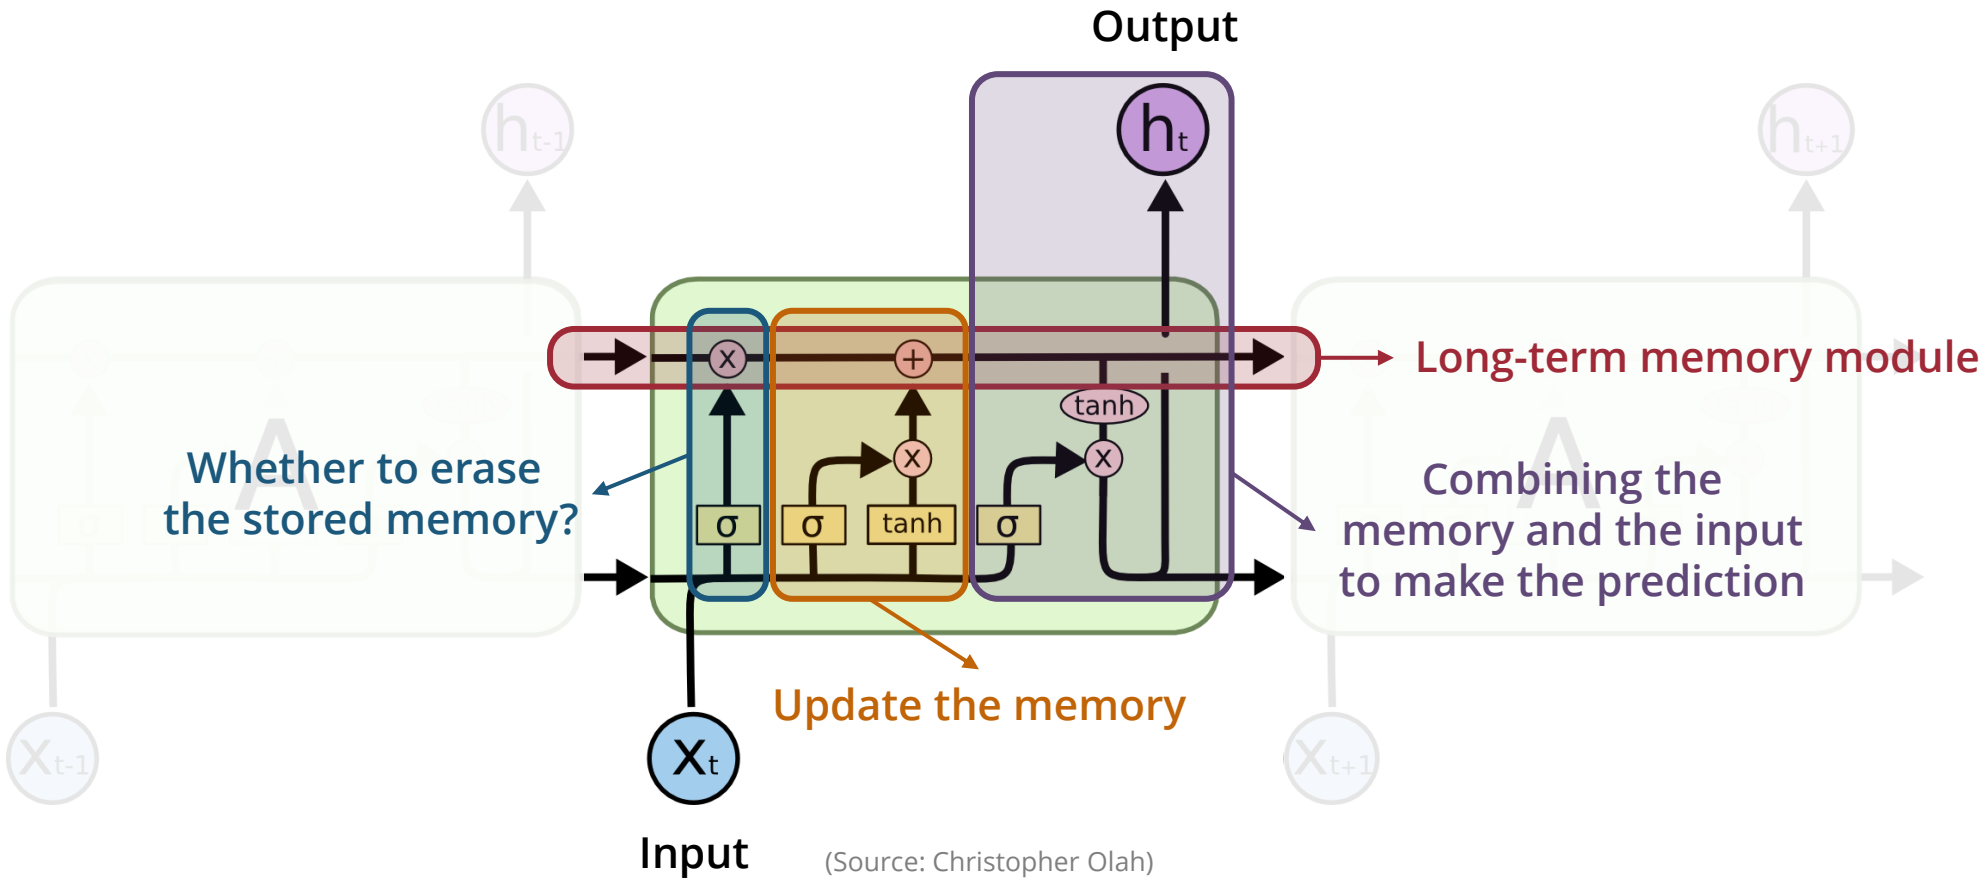
- **Data**
  - Collections of folk tunes
- **Representation**
  - ABC notation without metadata
- **Model**
  - LSTM (long short-term memory)
  - Working on the character level



folkrnn.org

Bob L. Sturm, Joao Felipe Santos, and Iryna Korshunova, "Folk Music Style Modelling by Recurrent Neural Networks with Long Short Term Memory Units," *ISMIR Late-Breaking Demos*, 2015.

Demystifying LSTMs (Hochreiter & Schmidhuber, 1997)

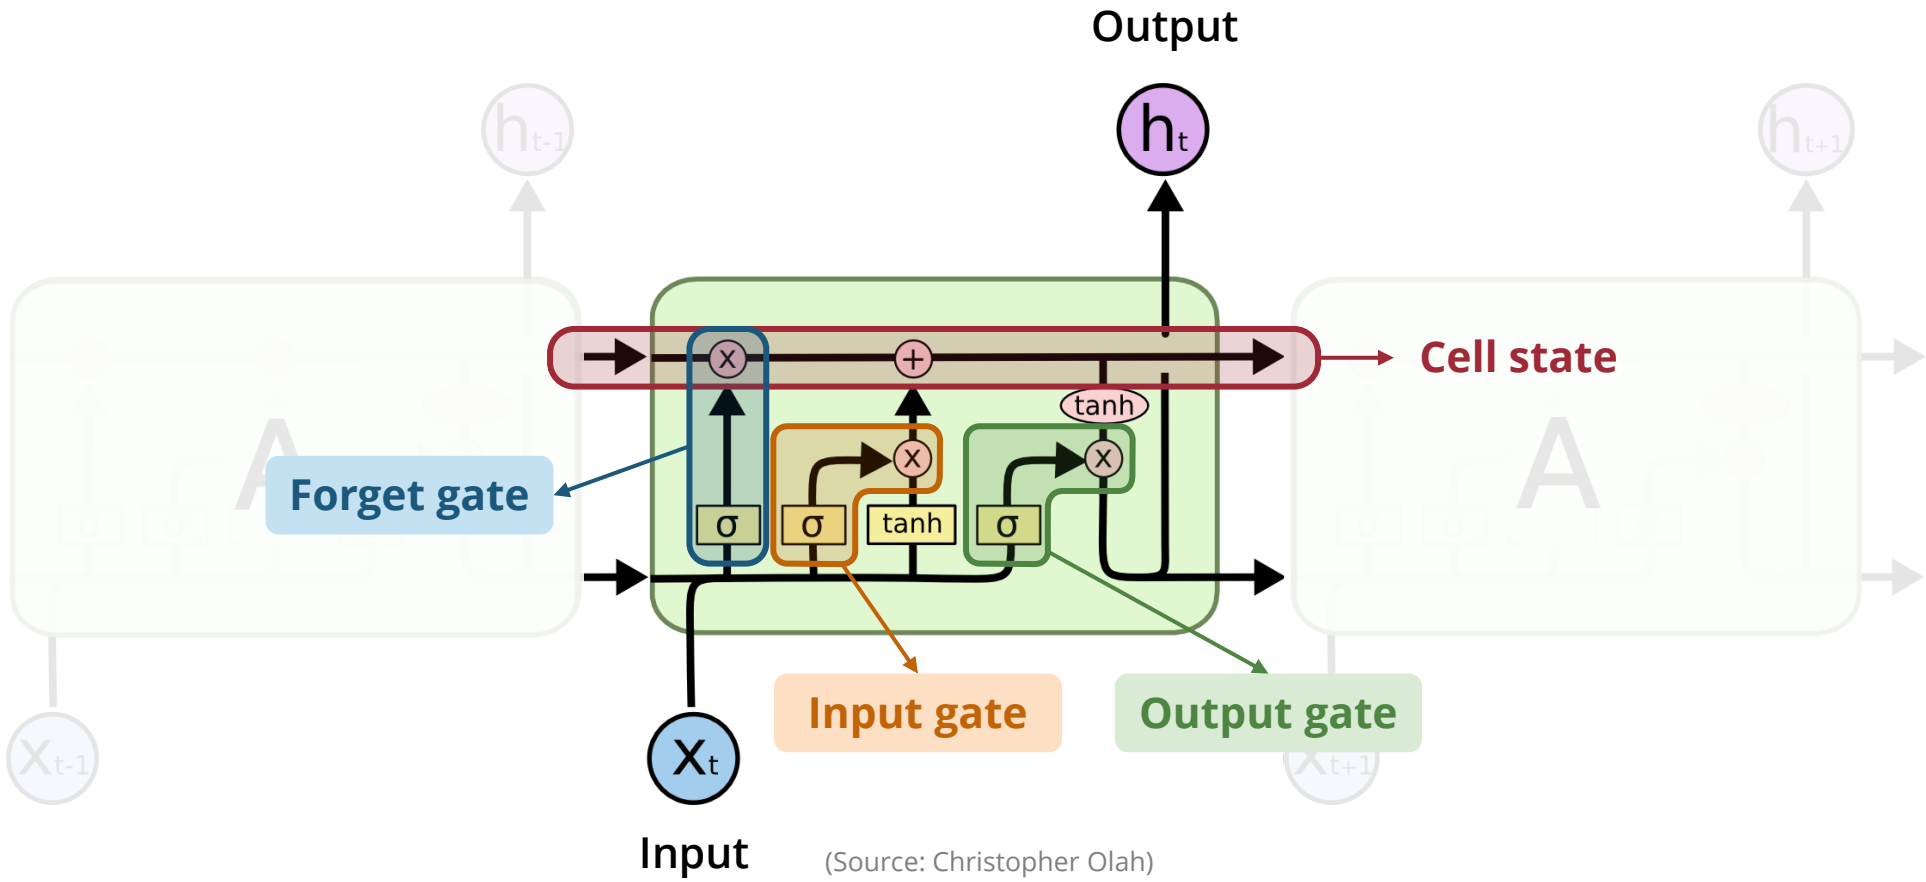


(Source: Christopher Olah)

colah.github.io/posts/2015-08-Understanding-LSTMs/

Sepp Hochreiter and Jürgen Schmidhuber, "Long Short-Term Memory," *Neural Computation*, 9(8):1735-1780, 1997.

Demystifying LSTMs (Hochreiter & Schmidhuber, 1997)

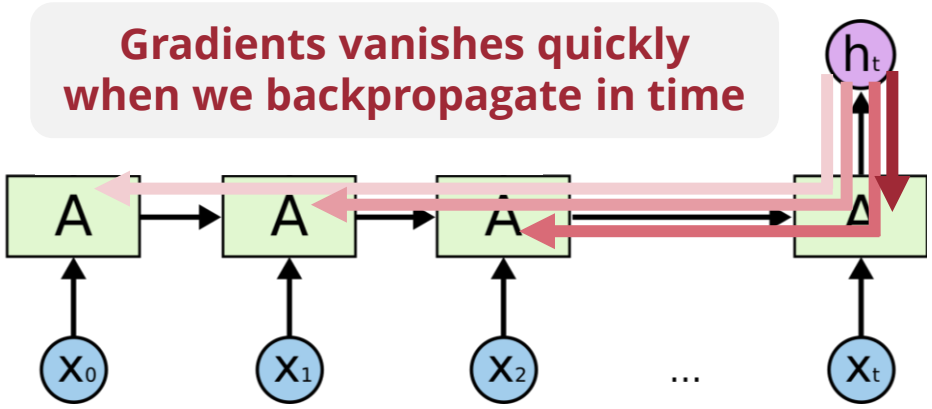


(Source: Christopher Olah)

colah.github.io/posts/2015-08-Understanding-LSTMs/

Vanishing Gradients

- An RNN is essentially a **very deep neural network**



All the layers share the same weight matrix

Can still train the model without deeper gradients

Why bother?

$$h_t = W_h h_{t-1} + W_x x_t + b$$

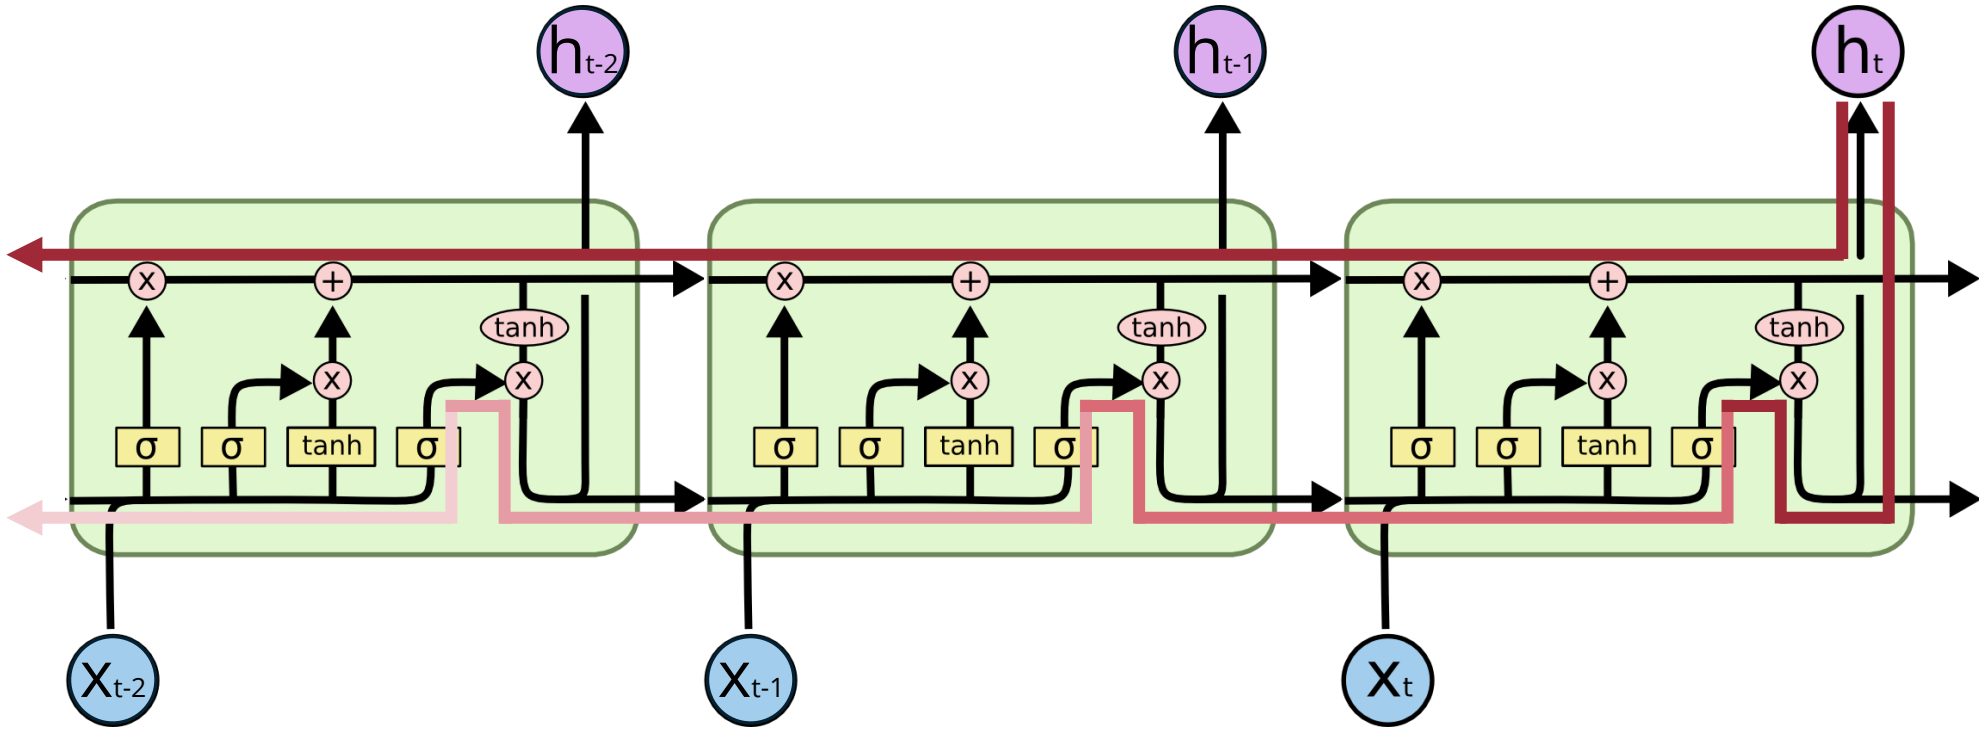
$$h_t = W_h(W_h h_{t-2} + W_x x_{t-1} + b\ ) + W_x x_t + +b$$

$$\vdots$$

$$h_t = W_h(W_x x_{t-1} + W_h(\ \cdots\ W_h h_0 + W_x x_1 + b\ \cdots\ ) + b\ ) + W_x x_t + +b$$

colah.github.io/posts/2015-08-Understanding-LSTMs/

How can LSTMs Help Alleviate Vanishing Gradients?

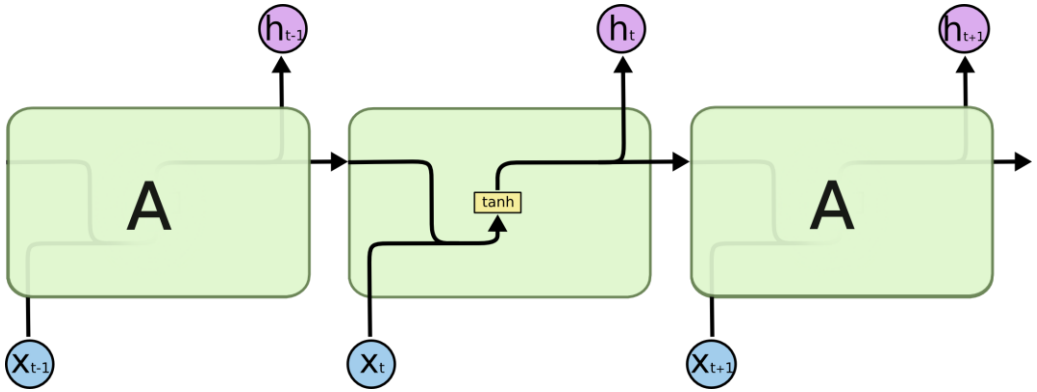


LSTMs does not completely solve vanishing gradients

Vanilla RNNs vs LSTMs

Vanilla RNN

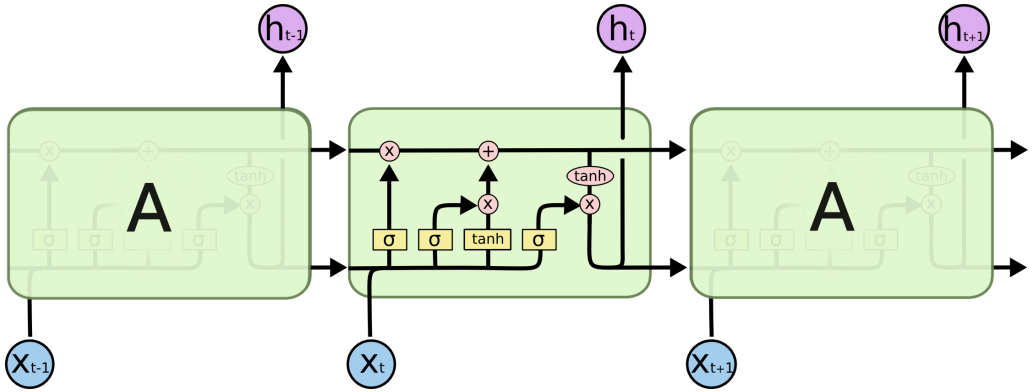
- Simplest form of RNNs
- Limited long-term memory
- Harder to train (due to gradient vanishing)



(Source: Christopher Olah)

LSTM

- Improved memory module
- Better long-term memory
- Easier to train

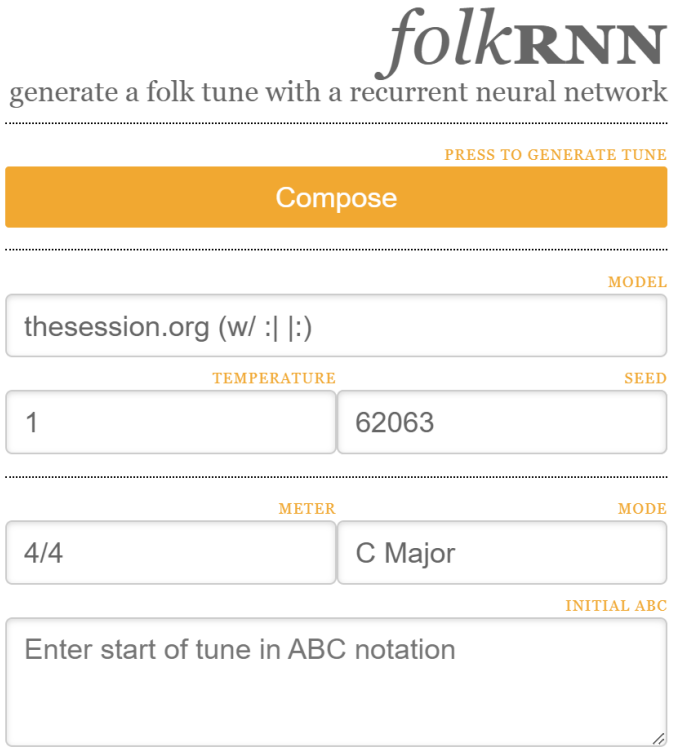


(Source: Christopher Olah)

colah.github.io/posts/2015-08-Understanding-LSTMs/

Example: Folk RNN (Sturm et al., 2015)

- Data
  - Collections of folk tunes
- Representation
  - ABC notation without metadata
- Model
  - LSTM (long short-term memory)
  - Working on the character level



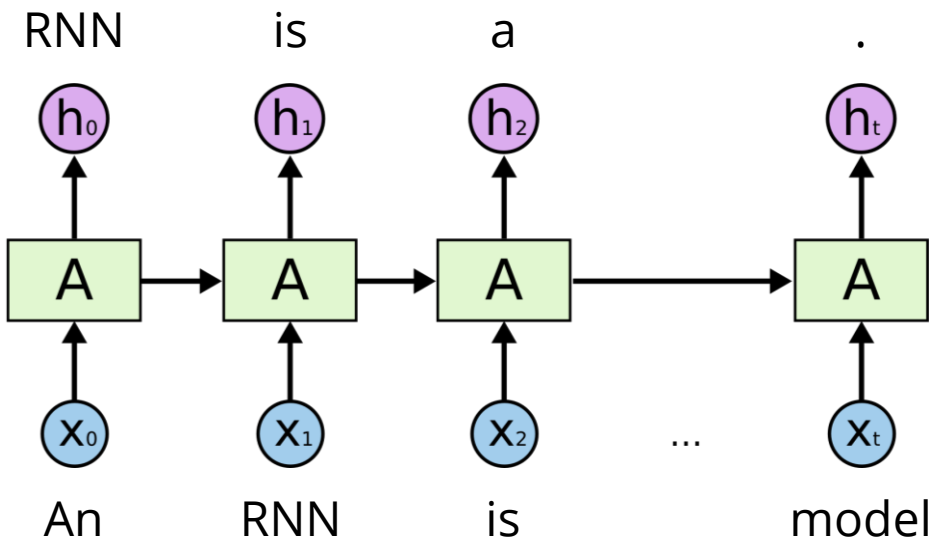
folkrnn.org

Bob L. Sturm, Joao Felipe Santos, and Iryna Korshunova, "Folk Music Style Modelling by Recurrent Neural Networks with Long Short Term Memory Units," *ISMIR Late-Breaking Demos*, 2015.

Word-level vs Character-level RNNs

Word-level RNNs

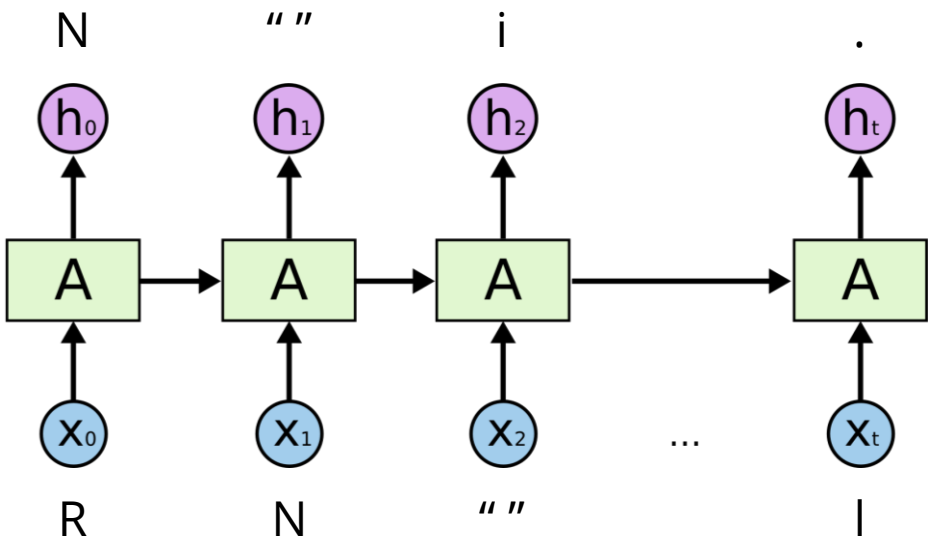
- Predicting word by word
- Most common



(Source: Christopher Olah)

Character-level RNNs

- Predicting character by character
- Useful when there is no natural “spaces”



(Source: Christopher Olah)

colah.github.io/posts/2015-08-Understanding-LSTMs/

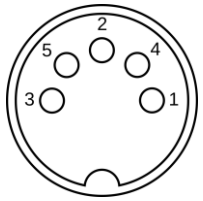
Limitations of ABC Notations

- Limited expressiveness
- Monophonic tunes only

MIDI-like Representation

MIDI (Musical Instrument Digital Interface)

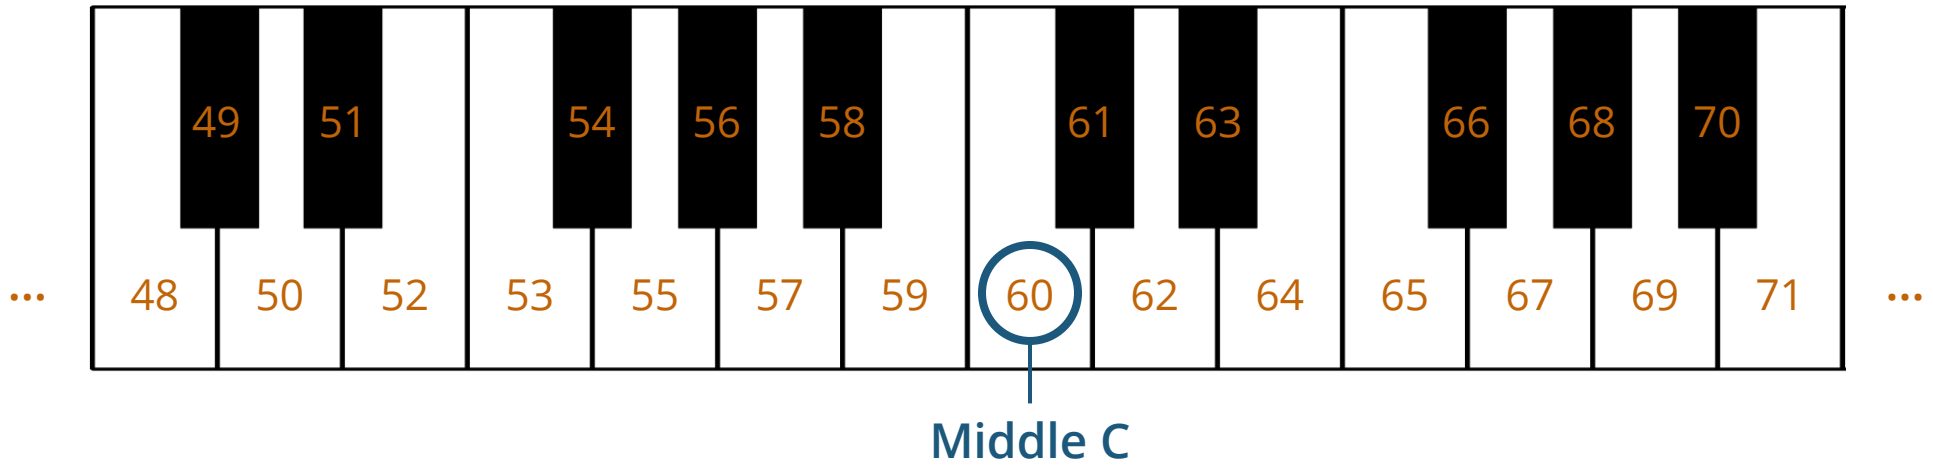
- A communication protocol between devices
- MIDI Messages
  - Note on
  - Note off
  - Delta time
  - Program change
  - Control change
  - Pitch bend change



MIDI I/O

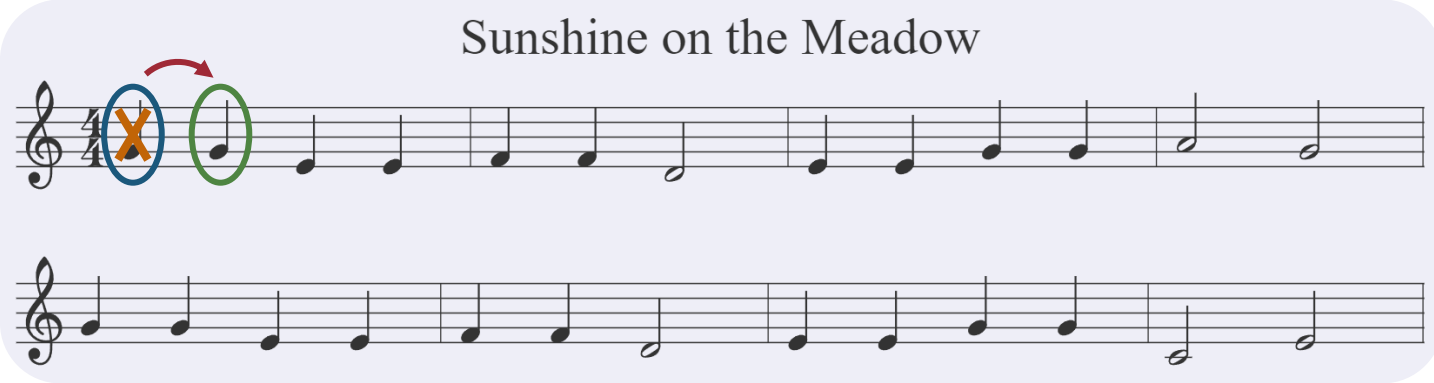
MIDI Note Numbers

- Ranging from 0 to 127
  - Middle C is 60
  - Wider than standard piano's pitch range
- Widely used in various software, keyboards and algorithms



Representing Music using MIDI Messages

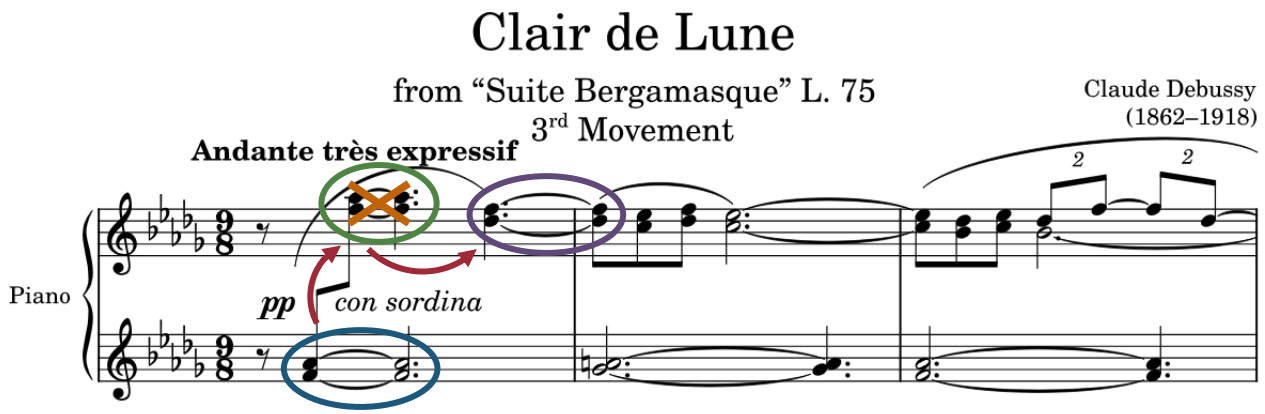
- Three main MIDI messages
  - Note on
  - Note off
  - Time Shift



```
Note_on_67, Time_shift_quarter_note, Note_off_67,
Note_on_67, Time_shift_quarter_note, Note_off_67,
Note_on_64, Time_shift_quarter_note, Note_off_64,
Note_on_64, Time_shift_quarter_note, Note_off_64,
...
```

Representing Polyphonic Music

- We can now handle music with multi-pitch at the same time
  - In the literature, "polyphonic" & "multi-pitch" are often used interchangeably



```
Note_on_65, Note_on_68, Time_shift_eighth_note, Note_on_77, Note_on_80,
Time_shift_half_note, Note_off_77, Note_off_80, Note_on_73, Note_on_77,
Time_shift_dotted_quarter_note, Note_off_65, Note_off_68, ...
```

Example: Performance RNN (Oore et al., 2020)

- Data
  - Yamaha e-Piano Competition dataset (MAESTRO)
- Representation
  - 128 Note-On events
  - 128 Note-Off events
  - 125 Time-Shift events (8ms–1s)
  - 32 Set-Velocity events — Handle dynamics
- Model
  - LSTM

Examples of generated music

Ian Simon and Sageev Oore, "Performance RNN: Generating Music with Expressive Timing and Dynamics," *Magenta Blog*, June 29, 2017.
Sageev Oore, Ian Simon, Sander Dieleman, Douglas Eck, and Karen Simonyan, "This Time with Feeling: Learning Expressive Musical Performance", *Neural Computing and Applications*, 32, 2020.

Example: A.I. Duet (Mann et al., 2016)

youtu.be/0ZE1bfPtvZo

experiments.withgoogle.com/ai/ai-duet/view/

github.com/googlecreativelab/aiexperiments-ai-duet

Example: Music Transformer (Huang et al., 2019)

- **Data**: Yamaha e-Piano Competition dataset (MAESTRO)
- **Representation**
  - 128 Note-On events
  - 128 Note-Off events
  - 100 Time-Shift events (10ms–1s)
  - 32 Set-Velocity events
- **Model**: Transformer

Almost the same representation as PerformanceRNN

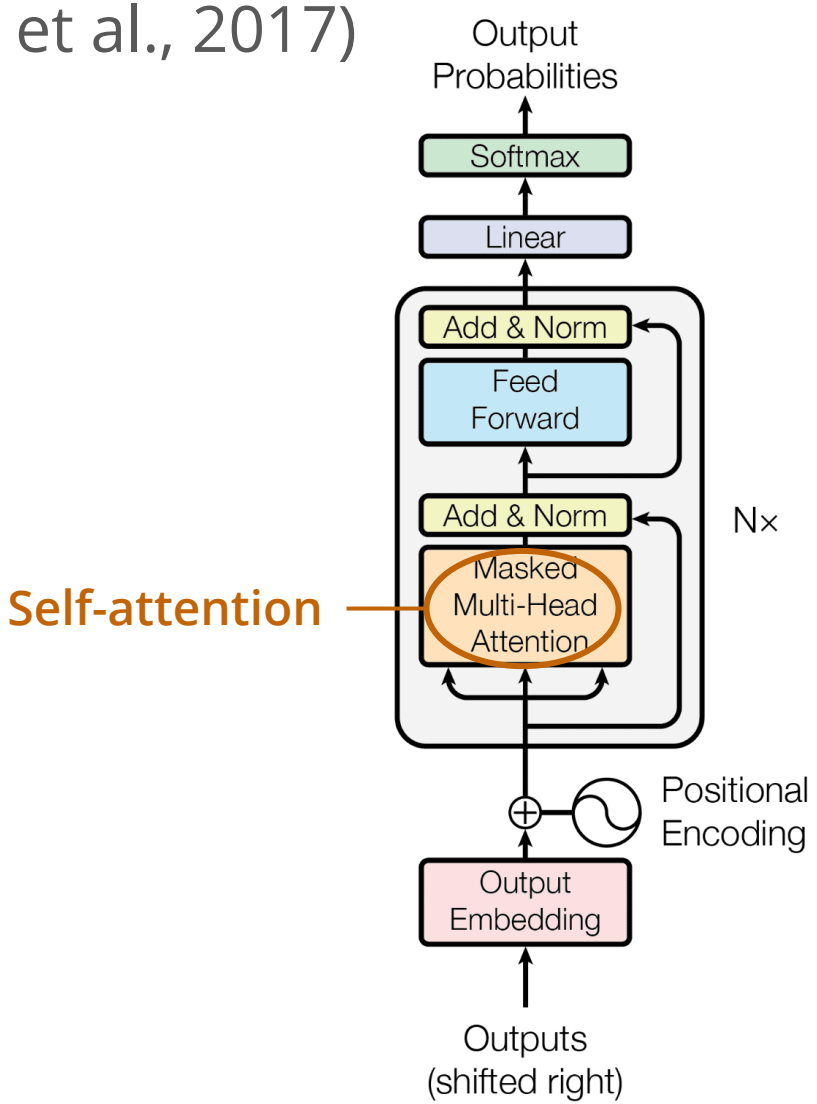
Handle dynamics

Examples of generated music

Cheng-Zhi Anna Huang, Ashish Vaswani, Jakob Uszkoreit, Noam Shazeer, Ian Simon, Curtis Hawthorne, Andrew M. Dai, Matthew D. Hoffman, Monica Dinculescu, and Douglas Eck, "Music Transformer: Generating Music with Long-Term Structure," *ICLR*, 2019.

What is a Transformer? (Vaswani et al., 2017)

- A type of neural network that use the **self-attention mechanism**



(Source: Vaswani et al., 2017; adapted)

Ashish Vaswani, Noam Shazeer, Niki Parmar, Jakob Uszkoreit, Llion Jones, Aidan N. Gomez, Lukasz Kaiser, and Illia Polosukhin, "Attention Is All You Need," *NeurIPS*, 2017.

Beyond Solo Music

Representing Multiple Instruments

- Using **MIDI program change** messages
  - Program numbers: 1–128 (or 0–127)
  - 128 instruments in 16 families

Prog#	INSTRUMENT
	1-8 PIANO
1	Acoustic Grand
2	Bright Acoustic
3	Electric Grand
4	Honky-Tonk
5	Electric Piano 1
6	Electric Piano 2
7	Harpsichord
8	Clav

Prog#	INSTRUMENT	Prog#	INSTRUMENT
	1-8 PIANO		**9-16 CHROMATIC PERCUSSION**
1	Acoustic Grand	9	Celesta
2	Bright Acoustic	10	Glockenspiel
3	Electric Grand	11	Music Box

Example: MuseNet (Payne et al., 2019)

- **Data**: ClassicalArchives + BitMidi + MAESTRO
- **Representation**: "**instrument:velocity:pitch**"
  - Time shifts in real time (sec)
- **Model**: Transformer

```
bach piano_strings start tempo90
piano:v72:G1 piano:v72:G2 piano:v72:B4
piano:v72:D4 violin:v80:G4 piano:v72:G4
piano:v72:B5 piano:v72:D5 wait:12
piano:v0:B5 wait:5 piano:v72:D5 wait:12
...
```

Example of generated music

Christine Payne, "MuseNet," *OpenAI*, 2019.

Example: Multitrack Music Machine (Ens & Pasquier, 2020)

- **Data**: Lakh MIDI Dataset (LMD)
- **Representation**: as shown →
- **Model**: Transformer

youtu.be/NdeMZ3y-84Q

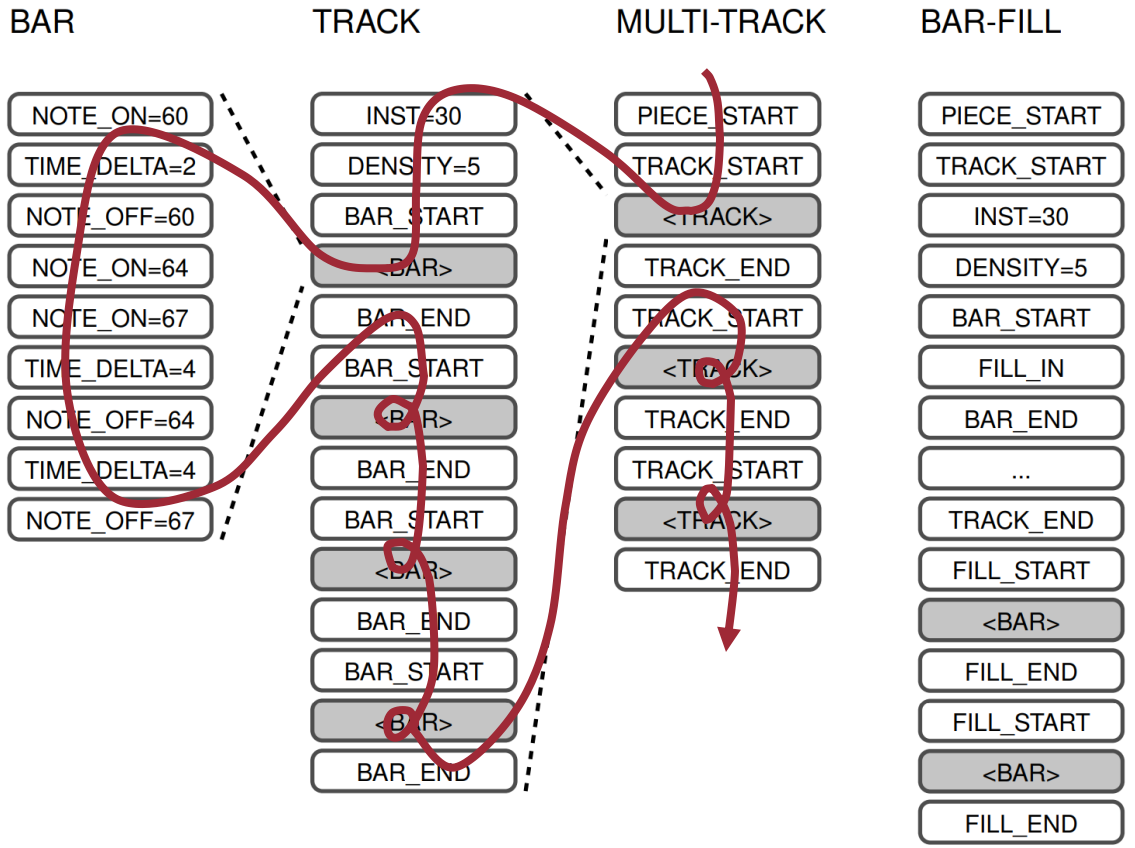

Fig. 1. The MultiTrack and BarFill representations are shown. The `<bar>` tokens correspond to complete bars, and the `<track>` tokens correspond to complete tracks.

Jeff Ens and Philippe Pasquier, "MMM : Exploring Conditional Multi-Track Music Generation with the Transformer," *arXiv preprint arXiv:2008:06048*, 2020.

Example: Multitrack Music Transformer (Dong et al., 2023)

- **Data**: Symbolic Orchestral Database (SOD)
- **Representation**: "**(beat, position, pitch, duration, instrument)**"
  - No time shift events **Why?**
- **Model**: Multi-dimensional Transformer

```
(0,  0,  0,  0,  0,  0)   Start of song
